Semitica Iberica:
Translations from Hebrew and Arabic into the Medieval
Romance Vernaculars of the Iberian Peninsula*
Charles B. Faulhaber
University of California, Berkeley

My purpose is very straightforward: to examine, as a group, the texts translated from Hebrew or Arabic into one of the medieval Romance vernaculars of the Iberian Peninsula, Castilian, Catalan, or Portuguese, and to seek to identify their commonalities and differences. Why these texts? What subject areas do they represent? When were they translated? Were they translated directly from the original language into the target language, or via one or more intermediate languages? How often are Hebrew and Arabic used as intermediating languages? What conclusions, if any, can be drawn for our understanding of cultural and intellectual relations among the three peoples of the book in medieval Spain?

* This is a slightly revised version of a paper given at the conference on Wine, Women and Song: Poetry of Medieval Iberia, University of California, Berkeley, April 29, 2001. For help in identifying the translated texts I am indebted to Adelaida Cortijo Ocaña, Ángel Sáenz Badillo, and David Wacks.

Until very recently a research project of this type, extremely simple in concept and absolutely basic, would have been almost impossible, requiring an enormous amount of effort just to locate the translations that are its object. But the existence of the PhiloBiblon database system of the primary sources for the study of the medieval Iberian vernacular literatures, in the broadest sense of the word, makes this almost a trivial exercise.¹

The existence of this tool allows us to find data rapidly and according to a wide range of search criteria. Similar work, based on these three corpora of medieval vernacular texts, opens dramatic possibilities for the study of medieval literature as a social or prosopographical phenomenon, that is, focusing on the social groups that created it as well as the ones for whom it was created.

Before examining the data, however, some caveats are in order. In the first place, the databases are not yet in fact exhaustive. Until very recently not much attention was paid to translations as objects of serious study in their own right; and we still have a long way to go before we can answer all the questions, even such a seemingly simple one as whether or not a given text *is* a translation, an adaptation, or an original composition based on Arabic or Hebrew sources. It is very likely that numerous texts which are in fact translations from Hebrew or Arabic have not been so identified. It is more than probable that some of the *ejemplos* in *El conde Lucanor* are of Arabic origin, but specific sources are wanting. Nor have we added systematically texts which are now lost but which we can confidently surmise to have existed on the basis of concrete references to them, like the *Tasrif* of Abū-l Qāsim al-Zahrāwī (Abulcasis), whose translator, Berenguer Eimeric, states that he translated it first into Catalan and then into Latin.² Finally, there are texts that have traditionally been assumed to be of Arabic origin, like

¹ *BETA* = Comp. Charles B. Faulhaber, Ángel Gómez Moreno, Angela Moll, and Antonio Cortijo, *Bibliografía Española de Textos Antiguos*. In: *PhiloBiblon*. 1.1- (1997-) (<http://sunsite.Berkeley.EDU/PhiloBiblon/phhmbe.html>). *BITAGAP* = Comp. Arthur L-F. Askins, Harvey L. Sharrer, Aida Fernanda Dias, and Martha E. ² Lluís Cifuentes, “*Translatar sciència en romans catalanesch*. La difusió de la medicina en

the titillating *Speculum al foderi* attributed to Albafumet, but on which further research is needed in order to trace their exact filiation.³

Thus the figures for the number of translations should be understood to be minimal. Similarly, the question of intermediate translations must be treated with caution. To what extent do texts which entered Spain from other languages via Hebrew and Arabic reflect Semitic influence? Undoubtedly some Semitic texts were translated through the intermediary of Latin (e.g. the *Compendio de los boticarios* of Saladino da Ascoli). At that point, was the translator from Latin aware that the text had originated in Hebrew or Arabic? Did it matter? By the same token, the ultimate origins of many texts purportedly translated from a Hebrew or Arabic original should in fact be traced beyond the Hebrew or Arabic to Greek, Syriac, Persian, and even Sanskrit (e.g., *Calila e Digna*).

Another problem is the fact that none of the three teams working on this project includes a specialist in medieval Hebrew or Arabic. Thus it is very likely that texts of Hebrew and Arabic origin have been overlooked through our own ignorance.

The data presented below, then, with very few exceptions, are based on existing texts identified as having been translated from Hebrew and Arabic in the secondary literature. Thus any conclusions are likely to be conservative, in the sense that there were undoubtedly more translations than those discussed here. Moreover, the results for each language are not strictly comparable because the corpora on which they are based are not comparable. The Portuguese corpus of 9089 texts includes all of the lyric poetry and large numbers of royal ordinances; the Catalan corpus of 4104 texts includes most of the lyric poetry; the Castilian corpus of 3244 texts still omits most of the lyric poetry.⁴ In addition, the three teams working on the databases have not been overly preoccupied with harmonizing their results, which has made comparison more difficult. In some cases it is impossible to know whether in fact one is dealing with the same text in two or more of the bibliographies because the original title is not indicated. Finally, another problem or, perhaps better, condition is that almost by definition we are talking about the culture of the lettered elite. The rich oral literature of medieval Iberia is an (almost) closed book.

All of this has some very palpable consequences. Before looking at the specific texts

Català a la baixa edat mitjana i el Renaixement”, *Llengua & Literatura* VIII (1997), 7-42 (p. 17).

³ Cifuentes, 21.

⁴ All figures represent the state of the various databases as of October, 2003.

translated from Semitic languages, however, let me put them within the broader context of the entire corpus of translations into the medieval peninsular languages: The Portuguese corpus contains 1021 translations, 11% of its total of 9089 texts. The Catalan corpus contains 514 translations, 12.5% of 4104 texts. The Castilian corpus contains 924 translations, 28.5% of 3244 texts. It is certain, however, that the proportion of translations into Castilian will be comparable to the Catalan and Portuguese figures once the lyric poetry is included.

There are a total of 141 translations from Arabic and Hebrew into Castilian. These data lend themselves to a number of observations when compared to the three translation corpora. What stands out immediately is the enormous preponderance of translations from Latin: 923 into Portuguese (90.4% of 1017 translations), 647 into Castilian (70% of 9924 translations), and 410 into Catalan (79.8% of 507 translations).⁵

In contrast, the number of texts translated from Hebrew and Arabic into any of the Romance vernaculars is exiguous: 100 texts translated into Castilian, 25 from Hebrew and 76 from Arabic; 32 texts translated into Catalan, five from Hebrew and 27 from Arabic; and just nine translated into Portuguese, three from Hebrew and six from Arabic. It should be pointed out, however, that Hebrew and Arabic are not unique in this respect. Only 48 French texts were translated into Castilian, and only 24 Italian ones.

What are these 141 texts translated from Hebrew and Arabic? As a first cut, they can be broken down by subject matter. The single largest category consists of scientific texts, in the broadest sense of the word; but their distribution is quite different in Castilian and Catalan. The Castilian results are skewed heavily toward astronomical and astrological texts because of the efforts of Alfonso the Learned (1252-84), who commissioned the translations (or composition based on Arabic sources) of some twenty texts from Arabic, known collectively as the *Libros del saber de astrología* (7.1-7.20).⁶ A precursor to that large-scale effort was the translation, dated March 12, 1254, of `Alī ibn Abī al-Rijāl's *Judíos de las estrellas*, as well as XXX. Samsó argues cogently that this burst of activity corresponds to the discovery of the Arabic texts in question in Cordova and Seville after their reconquest in 1236 and 1248 respectively.⁷ After this early effort

⁵ See Table 1 below.

⁶ Numbers in **boldface** are keyed to the Appendix.

⁷ Julio Samsó, 'Traducciones científicas arabo-romances en la Península Ibérica', in *Actes del VII Congrés de l'Associació Hispánica de Literatura Medieval (Castelló de la Plana, 22-26 de*

we find nothing until an anonymous text called *Alcabienis*, translated before 1432; and three texts by Māshā'allāh, found in a manuscript dated 1521.

The same 1432 manuscript contains five astronomical and astrological texts by the 12th-c. Jewish savant Abraham ibn Ezra, while two more translations of his works are found in another 15th-c. MS. Abraham Zacuto's *Ha-hibbūr ha-gadol* was translated at Salamanca in 1481 as the *Compilación magna*; eleven years later the author would be exiled to Portugal.

There are five astronomical texts in Catalan, an anonymous Arabic *Almanach* based on al-Zarqālī (Azarquiel) but translated from a Latin version of 1307, three texts by Jacob ben David Bonjorn, and a *Llibre dels judicis de les estrelles* of Abraham ibn Ezra. There are but two astronomical texts in Portuguese, another *Almanaque perduravel*, also from the Latin translation of al-Zarqālī of 1307 and translated around 1321 in Coimbra, and a translation, via the Castilian version, of the *Livro Cumprido nos Juízos das Estrelas*.

There are twelve medical texts, including Hippocrates' *Prognostica*, from the version of Constantinus Africanus, and Ishāq ibn Sūlaymān al-'Isrā'īlī's *Tratado de las fiebres*, both translated into Castilian. The same author's *De la coneixença de les orines* was translated into Catalan after 1392. Also translated into Catalan were Ibn Sīnā's *Canon*, Ibn Wāfid's *Llibre de les medicines particulars*, Galen's *Letters on the Cure of Diseases of the Eye*, and Hunayn ibn Ishāq al-'Ibādī's *Isagoge*, or introduction to Greek medicine.

Other subjects treated are veterinary medicine, particularly for birds of prey, such as the spectacular mid-13th-c. MS of al-Bayzār's *Kitāb al-Jawārih* (*Libro de los animales de caza*); agriculture, with treatises by Ibn Bassāl and pseudo-Ibn Wāfid, the latter translated into both Castilian and Catalan.

Only slightly less numerous than the scientific texts are those that are moral, religious, or philosophical in nature. The earliest of these are the 13th-c. translations of the Old Testament, probably commissioned by Alfonso the Learned. Perhaps the oldest of these is the translation of the Psalms attributed to Hermannus Alemannus, or Herman the German. There are at least two other 13th-c. versions, one from the 14th century, and two from the 15th century, including the *Biblia de Alba*, a profusely illuminated version translated between 1422 and 1432 by Rabbi Moses Arragel of Guadalajara. There is at least one partial version, a 15th-c. *History of the*

setembre de 1997), ed. Santiago Fortuño Llorens and Tomás Martínez Romero (Castelló de la Plana: Publicacions de la Universitat Jaume I, 1999), 199-231 (pp. 221-22).

Macchabees.

There are apparently no biblical texts translated from Hebrew in either Catalan or Portuguese; but Portuguese has a late medieval translation of the *Mishna (Pirqeī Avot)*; while a Catalan translation of the Qu=ran was known to have existed in the library of the Kings of Aragon in 1410 but is no longer extant. There are texts in Castilian that were obviously written for Jews, but it is not clear that they are translations. Thus MS 2015 of the library of the University of Salamanca has a *Paraquem* (*BETA* texid 2065), to be recited from the "pascua de Pezah hasta la pascua de Zucod," a *Libro del rey Asueros* (*BETA* texid 2066), a text called *Orahaym* or *Carrera de vidas* (*BETA* texid 2067), with instructions on how to guard the precepts of Mosaic law, a text *De la prosperidad, felicidad y generosidad del pueblo judío* (*BETA* texid 2068).

There was a darker side as well, religious polemics, principally anti-Jewish, such as the exchange of letters, purportedly in Arabic, between Samuel Yahūdī of Fez and Rabbi Isaac de Subiulmesta (Isaac de Sujulmeza), starting with the former's *Epistola contra errores Judaeorum*, supposedly written in 1078 and translated into Latin in 1339 by Alfonsus Bonihominis, bishop of Marrakech, and thence into both Castilian and Catalan; or the *Disputation* between Abutalib the Saracen and Samuel the Jew, over which faith should have precedence, that of the Christians, that of the Jews, or that of the Saracens, translated into Castilian in 1458. The authenticity of both of these disputations has been called into question; Marsmann believes them to have been written in Latin by Alfonsus Bonihominis.⁸ The 14th-c. *Moreh Tzedek* or *Mostrador de justicia* of Alfonso de Valladolid, or Abner of Burgos before he converted to Christianity, belongs to the same tradition.

Despite, or perhaps because of, the increasingly hostile atmosphere toward the Jews in 15th-c. Spain, two of the greatest works of the Jewish speculative tradition were translated almost simultaneously, around the middle of the century: Yehuda Halevi's *Kitāb al-Khuzārī* and Maimonides' *Moreh Nevukhīm*, translated as *Mostrador y enseñador de los turbados* and known in English as the *Guide of the Perplexed*.

There was a parallel current as well, also focused on ethics, but almost entirely practical and secular in nature, the series of texts known generically as "wisdom literature" in English, or

⁸ Monika Marsmann, *Die Epistel des Rabbi Samuel an Rabbi Isaak. Untersuchung und Edition*, Inaug.-Diss.--Ludwig-Maximilians-Universität, Munich, (Siegen, 1971).

"libros de sapiencia" in Spanish. In Spain this tradition goes back as far as Petrus Alfonsi at the beginning of the 12th century; but it flourished in the 13th, particularly in Castile. Thus we have three separate translations of the pseudo-Aristotelian *Sirr al-'asrār*, in Castilian the 13th-c. *Poridad de las poridades*, based on the western branch of the text, and the *Secreto de los secretos*, contemporary Catalan *Secret del secrets*, and a 14th-c. Navarro-Aragonese *De secreto secretorum*, on the eastern. Exactly similar in their didactic purpose are Hunayn ibn Ishāq's *Kitāb adab al-falāsifa* or *Libro de los buenos proverbios* and al-Mubaššir ibn Fātik's *Mukhtār al-ḥikām* or *Bocados de oro*, both enormously popular. Just slightly less so was the beast fable *Kalīla wa-Dimna*, which entered Castilian directly from Arabic in the 13th c. and then again in the late 15th-c. via Hebrew and Latin as the *Exemplario contra los engaños y peligros del mundo*. And of course there is the *Sindibad*, or *Sendebar*, translated by order of the infante Fadrique, son of Fernando III el Santo, in 1253. These texts soon gave rise to others based on them, although composed in the vernacular, such as the *Flores de filosofía* or the *Libre de saviesa* attributed to Jaume I of Aragon, who died in 1276.

The scattering of remaining texts can be grouped under the general rubric of history or politics. The only purely historical text is the *Akhbār mulūk al-Andalus* of Aḥmad ibn Muḥammad ibn Mūsā al-Rāzī, or the *Crónica del moro Rasis*, translated first into Portuguese before 1315—although that version is missing—and from Portuguese into Castilian around 1425 or 1430; and the Bancroft manuscript that we showed you on Friday is one of the earliest ones. Finally, there is a series of extremely interesting letters mostly exchanged between Christian and Islamic monarchs, beginning with Abū Sa`īd's *Carta al rey de Benimerín*, addressed to Abū al-Hasan, king of Morocco, before 1348, and ending with Muhammed Xeque's letter to king Manuel I of Portugal in 1498. Undoubtedly there are many more.

What are we to make of this? I find it interesting that the texts can be grouped so easily into two large spheres, the scientific, and the religious or moral. Only one text is found in all three languages, the *Sirr al-'asrār* (*Secretum secretorum*). Only five texts are found in more than one language, the *Judizios de las estrellas* and the *Mishna*, in Castilian and Portuguese, pseudo Ibn Wāfid's *De agricultura* in Castilian and Catalan; and the exchange of letters between Samuel of Fez and Isaac de Subiulmesta (Isaac de Sujulmeza), also in Castilian and Catalan. It is perhaps not surprising that there is no biblical commentary. It is surprising, at least to me, that there is no 'adab, (nothing of what we would call literature, no evidence of any interest in narrative prose or lyric poetry—at least as direct translations. Don Juan Manuel, for example,

undoubtedly drew on Arabic texts in *El conde Lucanor*, at least indirectly, but it has proven impossible to trace direct translations. As Juan Vernet points out, "La relación de la narrativa árabe con la occidental es fácilmente detectable en lo que se refiere a la temática y más compleja cuando afecta a la estructura o cuadros del relato."⁹ Where there are direct translations (e.g., *Calila e Digna* or *Sendebar*), they have an evident didactic function.

If we look briefly at the texts translated from Latin, as I did in a paper published several years ago, we shall see that almost two-thirds of the texts are religious in nature, ranging from the sacred texts to liturgical works, devotional works, saints' lives. There is a coincidence in moral philosophy, for example, the *De regimine principum* tradition.

Chronologically speaking, we see scientific texts translated in the second half of the thirteenth century, and then again in the second half of the fifteenth century, due primarily to the influence of the universities. The ethical texts also profited from the burst of activity in the second half of the 13th century but tapered off rapidly after that. For the religious texts there seem to be two countervailing tendencies: an early flourishing of biblical translations, and a gradually intensifying level of polemical literature that led, especially after the pogroms of 1391 incited by the preaching of St. Vincent Ferrer, to an ever-increasing number of converts from Judaism to Christianity, and increasing pressure on the Jews who remained true to the faith of their fathers. At the same time certain members of the great noble families encouraged the translation of works by Jewish authors. More research is needed on religious factionalism in 15th-c. Spain. Of the 141 texts listed here, XXXX remain unidentified. They are assumed to be translations, but the original texts have not been located. In fact they may be free versions or even texts originally written in Spanish on the basis of Hebrew or Arabic source materials. Each of these "unidentified" texts is worthy of, at least, a transcription in order to make it available to the scholarly world and, preferably, a monographic study.

Absent such studies, further conclusions can only be tentative; but it is obvious that a topic like this one needs to draw together bits and pieces of evidence from scattered sources. What can we learn from medieval library inventories? What about source studies? What about the reverse trend? What texts were translated from Catalan, Portuguese, or Castilian into Hebrew and Arabic? Of which texts are there aljamiado versions? (19 in BETA). Does it help to think of prestige vs. non-prestige languages? And once we get past these more-or-less external

⁹ Juan Vernet, *Lo que Europa debe al Islam de España* (Barcelona: El Acantilado, 1999), 453.

considerations, how should we evaluate the translations themselves? What can they tell us of medieval translation practice? Do the translators work ad sensum or ad verbum? Are there metacritical commentaries on the translation process itself?

In short, there are a lot more questions than answers.

Appendix: Translations into the Romance Vernaculars of Medieval Spain from Arabic and Hebrew

The following list is intended to be complete, but it undoubtedly lacks texts that were translated from Hebrew and Arabic and includes texts that were not. In addition to the identification of the text, with its identification number (texid) in *BETA*, *BITAGAP*, or *BITECA*, the best or most recent editions of the original, where known, are also given, although this list is incomplete.

For most secondary literature concerning each text as well as manuscripts and editions of the translations, see the relevant entry in *BETA*, *BITECA*, or *BITAGAP* (<http://sunsite.Berkeley.EDU/PhiloBiblon/phhm.html>). Please send additions or corrections to Charles Faulhaber (cfaulhab@library.berkeley.edu). Some editions and secondary references have also been added for more obscure or problematic texts.

The texts are arranged by target language (Castilian, Catalan, Portuguese), then by language of origin (Arabic, Hebrew), then by subject matter, then roughly in chronological order by date of translation, although in many cases the latter is conjectural.
