Elegy for Fallen Wellies for Trombone Quintet

Steve Parker

This piece is written in notation invented by the American composer Ben Johnston.

The diatonic pitches are tuned 1/1, 9/8, 5/4, 4/3, 3/2, 5/3, 15/8, 2/1 (1/1 = 'C')

These are indicated by the natural sign

- raises the diatonic pitch by a ratio of 81/80
- lowers the diatonic pitch by a ratio of 81/80
- raises the diatonic pitch by a ratio of 25/24
- b lowers the diatonic pitch by a ratio of 25/24
- / raises the diatonic pitch by a ratio of 36/35
- 7 lowers the diatonic pitch by a ratio of 36/35

The signs are combined to raise or lower further

If needed, the composer can provide more explanation, a complete list of ratios used in the piece and a list of distance in cents of each pitch from its equal tempered equivalent.

The composer feels that dynamic markings are a pretty blunt instrument which have a dictatorial effect. Therefore dynamics are left to the ensemble, both pre-arranged and spontaneous. Dynamic changes should be natural and organic but this does not preclude large or sudden changes.

Legato and full-length notes are the default.

Vibrato should be used expressively, not as a default and never for tuning purposes.
