CA Voters Became More Polarized on the Pandemic Overtime: Views Shifted on Both the Left and Right

G. Cristina Mora, IGS Co-Director UC Berkeley
Norah MacKendrick, Rutgers University
Hana Shepherd, Rutgers University

IGS poll data show that California voters became more polarized in their views of the pandemic between the spring and summer. Voters who approve and disapprove of Trump's performance as President moved farther apart, not simply on questions about the severity of the COVID-19 pandemic, but also on their beliefs about effective COVID-19 prevention measures.

The IGS poll of California voters was conducted in April 2020 (n=8800) and again in July 2020 (n=8328). Respondents were asked about their perceptions of the extent of health risk posed by COVID-19 and the effectiveness of various prevention measures, including those endorsed by public health officials, such as staying at home, wearing masks, and washing hands. Those who responded that they either strongly approve or somewhat approve of Trump's job performance were compared to those who reported that they either strongly disapprove or somewhat disapprove of Trump's job performance.

Perceptions of the extent of health threat posed by COVID-19 were polarized by Trump approval in April: 37% of those who reported approving of the job Trump was doing saw COVID-19 as a major threat to their personal and family's health, compared with 58% of those who reported disapproving of the job Trump was doing-- a gap of 21 percentage points. By July, the gap between these groups grew by 10 percentage points: 34 percent of Trump approvers saw COVID-19 as a major health threat, compared to 65% of those disapproving of Trump.

Table 1 Perceptions of the Extent of the Health Threat Posed by COVID-19

April				July			
	No Threat	Minor Threat	Major Threat		No Threat	Minor Threat	Major Threat
Approve of Trump	17%	43%	37%	Approve of Trump	21%	42%	34%
Disapprove of Trump	4%	36%	58%	Disapprove of Trump	3%	30%	65%
Difference	13%	7%	-21%		18%	12%	-31%

In April, respondents were already polarized in their beliefs about the efficacy of different prevention measures based on their approval of the job Trump is doing as president. By July, this polarization of beliefs about public health-endorsed measures had increased. Specifically, in April, 62% of those approving of Trump considered staying home to be extremely effective for prevention, compared to 89% of those disapproving of Trump. By July, this gap widened, where only 48% of Trump approvers believed that staying home was extremely effective, compared to 88% of Trump disapprovers, a change in the difference between the two groups of 13 percentage points.

Table 2. Perceptions of Staying at Home as a Prevention for COVID-19

April				July			
	Not at all	Somewhat	Extremely		Not at all	Somewhat	Extremely
Approve of Trump	8%	29%	62%	Approve of Trump	20%	29%	48%
Disapprove of Trump	1%	10%	89%	Disapprove of Trump	1%	10%	88%
Difference	7%	19%	-27%		19%	19%	-40%

Beliefs about the efficacy of face masks— a measure that Trump has repeatedly questioned the value of— became especially polarized over this period. In April, 37% of those approving of Trump considered face masks to be extremely effective for prevention, compared to 45% of those disapproving of Trump. In July, 38% of Trump approvers believed face masks to be extremely effective, compared to 77% of Trump disapprovers. The difference between the two groups over this period increased by 31 percentage points. Notably, the percentage of Trump approvers who reported believing

that wearing a face mask was not at all effective increased 9 percentage points from April to July (from 12 to 21%).

Table 3. Perceptions of Face Covering as a Prevention for COVID-19

	April			July		
	Not at all	Somewhat	Extremely	Not at all	Somewhat	Extremely
Approve of Trump	12%	48%	37%	21%	38%	38%
Disapprove of Trump	4%	49%	45%	1%	20%	77%
Difference	8%	-1%	-8%	20%	18%	-39%

IGS Co-Director G. Cristina Mora observed that “the findings show that while political polarization can happen on both sides, in the case of masks it seems that more liberal Californians were amenable to change and shifted their perceptions and behavior as CDC recommendations changed, while conservatives remained steadfast in their beliefs.”

We even see some shifts in beliefs for arguably the least controversial public health recommendation, washing hands; in this case, both Trump approvers and disapprovers change in the same direction. In April, 80% of Trump approvers endorsed this measure as extremely effective (compared to 86 percent of Trump disapprovers). By July, 74% of Trump approvers considered hand washing to be an extremely effective prevention measure, compared to 82% of Trump disapprovers (a change in the difference between the groups of 2 percentage points).

Table 4. Perceptions of Washing Hands as a Prevention for COVID-19

	April			July			
	Not at all	Somewhat	Extremely	Not at all	Somewhat	Extremely	
Approve of Trump	1%	19%	80%	Approve of Trump	3%	23%	74%
Disapprove of Trump	0%	14%	86%	Disapprove of Trump	0%	17%	82%
Difference	1%	5%	-6%		3%	6%	-8%

In contrast, we see no change in the magnitude of the difference between the groups for beliefs about vitamins and eating a healthy diet (e.g., 25% of Trump approvers saw taking vitamins as extremely effective in April and the same in July, compared to 16% of Trump disapprovers in both April and July).

These results are important to consider in light of the President’s recent hospitalization. As Mora noted, “last week the President made bold public statements about medical treatments he believes had helped him recover from COVID-19. Our polling data suggest that Trump approvers will be quick to support these recommendations, even if warned against doing so by doctors or public health experts. This will certainly present a challenge for medical practitioners and public health officials across the country as we move into the fall and winter.”

About the IGS Survey

The findings in this report are based on a Berkeley IGS Poll completed by the Institute of Governmental Studies (IGS) at the University of California, Berkeley in conjunction with the California Institute of Health Equity and Access. The April poll was administered online in English and Spanish between April 16 and 20 among 8,800 registered voters statewide. The July poll was administered online in English and Spanish July 21-27, 2020 among 8,328 California registered voters.

Both surveys were administered by distributing email invitations to stratified random samples of the state’s registered voters. Once the questionnaire and email invitations had been finalized, they were translated into the Spanish and reviewed for cultural appropriateness. Each email included an invitation for invited voters to participate in a nonpartisan survey and provided a link to the IGS website where the survey was housed. Reminder emails were distributed to non-responding voters and an opt out link was provided for voters not wishing to participate and not wanting to receive future emails from IGS about the survey.

Samples of registered voters with email addresses were provided to IGS by Political Data, Inc., a leading supplier of registered voter lists in California and were derived from information contained on the state's official voter registration rolls. Prior to the distribution of emails, the overall sample was stratified by age and gender in an attempt to obtain a proper balance of survey respondents across major segments of the registered voter population. To protect the anonymity of survey respondents, voters' email addresses and all other personally identifiable information derived from the original voter listing were purged from the data file and replaced with a unique and anonymous identification number during data processing.

In addition, post-stratification weights were applied to align the sample of registered voters responding to the survey to population characteristics of the state's registered voters. Detailed tabulations reporting the results to each question can be found at the Berkeley IGS Poll website at <https://www.igs.berkeley.edu/research/berkeley-igs-poll>

About the Institute of Governmental Studies

The Institute of Governmental Studies (IGS) is an interdisciplinary organized research unit that pursues a vigorous program of research, education, publication and public service. A component of the University of California system's flagship Berkeley campus, IGS is the oldest organized research unit in the UC system and the oldest public policy research center in the state. IGS's acting co-directors are Professor Eric Schickler and Associate Professor Cristina Mora.

IGS conducts periodic surveys of public opinion in California on matters of politics and public policy through its *Berkeley IGS Poll*. The poll, which is disseminated widely, seeks to provide a broad measure of contemporary public opinion, and to generate data for subsequent scholarly analysis. The director of the *Berkeley IGS Poll* is Mark DiCamillo. For a complete listing of stories issued by the *Berkeley IGS Poll* go to <https://igs.berkeley.edu/igs-poll/berkeley-igs-poll>.

**Tabulations from an April 2020 Survey
of California Registered Voters
about the COVID-19 Pandemic**

by the
Berkeley IGS Poll
Institute of Governmental Studies
University of California, Berkeley

April 16-20, 2020

Introduction

The statistical tabulations in this volume are based on a *Berkeley IGS Poll* completed by the Institute of Governmental Studies (IGS) at the University of California, Berkeley. The poll was administered online in English and Spanish April 16-20, 2020 among 8,800 registered voters statewide.

The survey was administered by distributing email invitations to a random sample of the state's registered voters whose email address was listed on the state's voter registration rolls. The sample was provided to IGS by Political Data, Inc., a leading supplier of registered voter lists in California. In an attempt to improve the representativeness of non-English speaking Latinos, the sample was augmented with additional listings of foreign-born Latinos. Once the questionnaire and email invitations had been finalized, they were translated into Spanish and reviewed for cultural appropriateness. Each email invited voters to participate in a non-partisan survey conducted by IGS and provided a link to the IGS website where the survey was housed. Reminder emails were distributed to non-responding voters and an opt out link was provided for voters not wishing to participate and not wanting to receive future emails from IGS about the survey.

To protect the anonymity of survey respondents, voters' email addresses and all other personally identifiable information were purged from the data file and replaced with a unique and anonymous identification number during data processing. At the conclusion of the data processing phase, post-stratification weights were applied to align the sample to population characteristics of the state's overall registered voter population.

The sampling error associated with the results from the survey are difficult to calculate precisely due to the effects of the post-stratification weighting. Nevertheless, it is likely that the results from the overall sample of registered voters are subject to an approximate sampling error of approximately +/- 3 percentage points at the 95% confidence level. Results based on subgroups of this population would be subject to larger margins of sampling error.

About the Institute of Governmental Studies

The Institute of Governmental Studies (IGS) is an interdisciplinary organized research unit that pursues a vigorous program of research, education, publication and public service. **Tabulations from a late July 2020 Survey
of California Registered Voters
about the Coronavirus (amended)**

by the
Berkeley IGS Poll
Institute of Governmental Studies
University of California, Berkeley

July 21-27, 2020

Introduction

The statistical tabulations in this volume are based on a *Berkeley IGS Poll* completed by the Institute of Governmental Studies (IGS) at the University of California, Berkeley. The poll was administered online in English and Spanish July 21-27, 2020 among 8,328 California registered voters.

The survey was administered by distributing email invitations to stratified random samples of the state's registered voters. Each email invited voters to participate in a non-partisan survey conducted by the University and provided a link to the IGS website where the survey was housed. Reminder emails were distributed to non-responding voters and an opt out link was provided for voters not wishing to participate and not wanting to receive further email invitations.

Samples of registered voters with email addresses were provided to IGS by Political Data, Inc., a leading supplier of registered voter lists in California. The email addresses of voters were derived from information contained on the state's official voter registration rolls. Prior to the distribution of the emails, the overall sample was stratified by age and gender in an attempt to obtain a proper balance of survey respondents across all major segments of the registered voter population.

To protect the anonymity of survey respondents, voters' email addresses and all other personally identifiable information derived from the original voter listing were purged from the data file and replaced with a unique and anonymous identification number during data processing. Post-stratification weights were applied to align the sample of the registered voters responding to the survey to population characteristics of the state's registered voters. .

The sampling error associated with the results from the survey are difficult to calculate precisely due to the effects of sample stratification and the post-stratification weighting. Nevertheless, it is likely that the results from the overall sample of registered voters are subject to a sampling error of approximately +/- 2 percentage points at the 95% confidence level.

About the Institute of Governmental Studies

The Institute of Governmental Studies (IGS) is an interdisciplinary organized research unit that pursues a vigorous program of research, education, publication and public service. A component of the University of California system's flagship Berkeley campus, IGS is the oldest organized research unit in the UC system and the oldest public policy research center in the state. IGS's co-directors are Professor Eric Schickler and Associate Professor Cristina Mora.

IGS conducts periodic surveys of public opinion in California on matters of politics and public policy through its *Berkeley IGS Poll*. The poll, which is disseminated widely, seeks to provide a broad measure of contemporary public opinion, and to generate data for subsequent scholarly analysis. The director of the *Berkeley IGS Poll* is Mark DiCamillo. For a complete listing of stories issued by the *Berkeley IGS Poll* go to <https://www.igs.berkeley.edu/research/berkeley-igs-poll>.

July 2020 Berkeley IGS Poll

Table 100: The U.S. Supreme Court recently rejected a plan by the Trump administration to end the Deferred Action for Childhood Arrivals (DACA) program that gives work permits and protections from deportation to approximately 700,000 young immigrants who were brought to the U.S. illegally as children. Do you favor or oppose the High Court’s ruling which keeps in place the DACA program’s protections for these young immigrants? (Registered Voters)
