Note: Population estimates accompany the Williams Institute’s [LGBT Demographic Data Interactive](#). Due to rounding, estimates for subgroups (i.e., LGB cisgender adults, LGB transgender adults) will not always add up to the total (i.e., all LGB adults). As detailed in the methodological notes below, % LGBT draws upon 2017 data for the US estimate and from 2015-2017 or 2012-2017 aggregated data for state estimates. This means that the sum of all state estimates will not equal the total estimated number of US adults.

METHODOLOGICAL NOTES

% LGBT: The estimated percentages of adults age 18 and older who identify as LGBT is derived from the Gallup Daily Tracking Survey. The Gallup Daily Tracking survey is an annual list-assisted random digit dial (70% cell phone, 30% landline) survey, conducted in English and Spanish, of approximately 350,000 U.S. adults ages 18 and up who reside in the 50 states and the District of Columbia.

LGBT identity is based on response to the question, “Do you, personally, identify as lesbian, gay, bisexual, or transgender?” Respondents who answered “yes” were classified as LGBT. Respondents who answered “no” were classified as non-LGBT. Estimates derived from other measures of sexual orientation and gender identity will yield different results.

National estimates of the percentage of the population that is LGBT-identified use 2017 Gallup data, while state estimates use 2015-2017 data unless otherwise noted. Due to small overall population sizes, 2012-2017 data were aggregated for the following states: Alaska, Delaware, Hawaii, Idaho, Mississippi, Montana, New Hampshire, North Dakota, Rhode Island, South Dakota, Vermont, West Virginia, and Wyoming. All percentages correspond to those reported in the Williams Institute’s [LGBT Demographic Data Interactive](#).

LGBT (Total): To estimate the number of LGBT adults age 18 and older, nationally and by state, the weighted percentage of LGBT Gallup Daily Tracking respondents was applied to 2017 population estimates produced by the US Census Bureau (based on projections from the 2010 Census) for adults ages 18 and up and rounded to the nearest 1,000. Census estimates were obtained via American FactFinder Table PEPSYASEX, “Annual Estimates of the Resident Population by Single Year of Age and Sex for the United States, States, and Puerto Rico Commonwealth: April 1, 2010 to July 1, 2017.”

Range: To provide lower and upper bound estimates of the number of LGBT adults, nationally and by state, the lower and upper 95% confidence intervals for each weighted percentage were applied to the population estimates produced by the US Census Bureau as described above. 95% confidence interval = % LGBT + (1.96 * % LGBTSTANDARD ERROR). Ranges reflect the natural imprecision (due to sampling error) in percentages and estimates that are based upon survey samples rather than a census count.

LGB (Cisgender): To estimate the number of LGB adults age 18 and older who are cisgender (i.e., do not identify as transgender), the estimated number of transgender adults (column 6) was subtracted from the estimated number of LGBT adults (column 2). Estimates are rounded to the nearest 1,000. This estimate excludes all transgender adults—including those who identify as LGB, as well as those who do not.

LGB (Trans): To estimate the number of LGB adults age 18 and older who identify as transgender, the estimated number of transgender adults (column 6) was multiplied by the percentage of transgender adults estimated to identify as LGB.

The percentages of transgender adults who identify as LGB and do not identify as LGB are derived from unpublished analyses of the 2015-2017 Behavioral Risk Factor Surveillance System (BRFSS) data conducted by the Williams Institute. See www.cdc.gov/brfss for more information about the BRFSS and the optional sexual orientation and transgender status (“SOGI”) questions included on the BRFSS survey conducted by 34 states and the territory of Guam in 2015 or 2017.

BRFSS respondents who selected “yes, transgender, male-to-female”, “yes, transgender, female-to-male,” or “yes, transgender, gender-nonconforming” as responses to the question “Do you consider yourself to be transgender?” were categorized as transgender; those answering “no” were categorized as non-transgender (i.e., cisgender). Respondents who selected “lesbian or gay” or “bisexual” were categorized as LGB in response to the question “Do you consider yourself to be..?” Respondents who selected “straight” or who told the interviewer “other” were categorized as straight/other.

In the pooled 2015-2017 BRFSS data, 28.1% of transgender BRFSS respondents, identified as “lesbian or gay” (9.9%) or “bisexual” (18.1%), while 72.0% selected “straight” (64.9%) or said “other” (7.1%) as their sexual orientation. Due to rounding, percentages may not total to 100%.

Transgender (Total): The estimated percentage and number (rounded to the nearest 50) of adults ages 18 and older who identify as transgender are reported in: Flores, A. R., Herman, J. L., Gates, G. J., & Brown, T. N. T. (2016). [How Many Adults Identify as Transgender in the United States?](#) Los Angeles: Williams Institute.

Transgender (Straight/Other): To estimate the number of transgender adults who do not identify as LGB, the estimated number of transgender adults reported in Flores et al. (2016) was multiplied by the estimated percentage of transgender adults who did not identify as LGB (i.e., identified as “straight” or “other”) in unpublished analyses of 2015-2017 BRFSS data (column 5).

Transgender (LGB): See LGB (Trans) above, which details calculations used to determine the estimated number of adults who identify as both LGB and transgender.
