which proved to be more user-friendly. There are now 320 single-gene inborn errors of immunity underlying phenotypes as diverse as infection, malignancy, allergy, auto-immunity, and auto-inflammation. We herein propose the revised 2017 phenotypic classification, based on the accompanying 2017 IUIS Inborn Errors of Immunity Committee classification.

**Keywords** Primary immunodeficiencies · Classification · Phenotypic · IUIS · Inborn errors of immunity

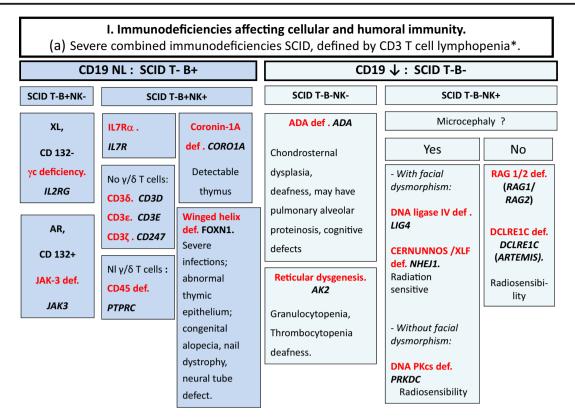

Human primary immunodeficiency diseases (PID) comprise 330 distinct disorders with 320 different gene defects listed [1]. Long considered as rare diseases, recent studies tend to show that they are more common than generally thought, if only by their rapidly increasing number [2, 3]. The International Union of Immunological Societies (IUIS) PID expert committee proposed a PID classification since 1999 [1], which facilitates clinical research and comparative studies worldwide; it is updated every other year to include new disorders or disease-causing genes. This classification is organized in tables, each of which groups PIDs that share a given pathogenesis. As this catalog is not adapted for use by the clinician at the bedside, the now called Inborn Errors of Immunity Committee proposed since 2013 a phenotypic complement to its classification [4]. Moreover, a smartphone application has been published, based on the 2015 phenotypic classification [5]. As the number of inborn errors of immunity is quickly increasing,

Fig. 1 Immunodeficiencies affecting cellular and humoral immunity. **a** Severe combined immunodeficiencies defined by T cell lymphopenia. **b** Combined immunodeficiencies. \* T cell lymphopenia in SCID is defined by CD3+ T cells <  $300/\mu$ L. AD: autosomal dominant transmission; ADA: adenosine deaminase; Ag: antigen; AR: autosomal recessive transmission;  $\beta$ 2m: bêta-2 microglobulin; Bc: B cells; CBC: complete blood count; CD: cluster of differentiation; CVID: common variable immunodeficiency; def: deficiency; EBV: Epstein Barr virus; HHV8: human herpes virus 8; HIGM: hyper IgM syndrome; HPV: human papillomavirus; Ig: immunoglobulins; MHC: major histocompatibility complex; NI: normal; NK: natural killer; SCID: severe combined immunodeficiency; Tc: T cells; TCR: T cell receptor; Treg: regulatory T cells; XL: X-linked transmission

and at an even faster pace since the advent of next-generation sequencing, this phenotypic classification requires revision at the same pace as the classical IUIS classification.

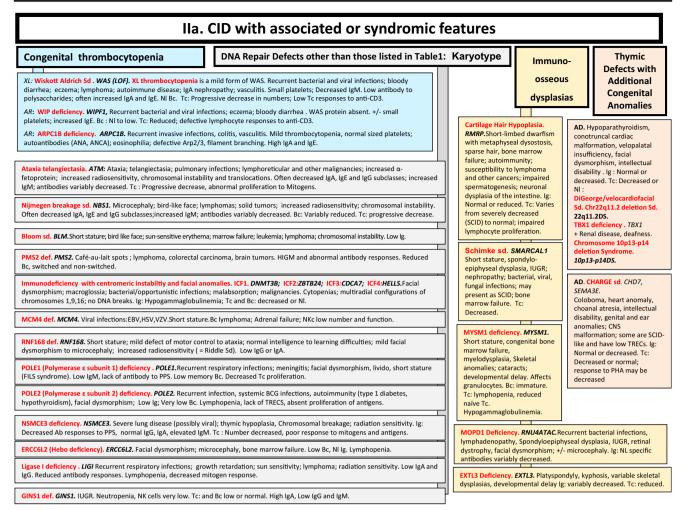

Here, we present an update of these figures (Figs. 1, 2, 3, 4, 5, 6, 7, 8, and 9), based on the accompanying 2017 report in inborn errors of immunity. We included all diseases included in the 2017 update of the IUIS classification [1] and split some categories in two parts to ease the lecture. An algorithm was assigned to each of the nine main groups of the classification and the same color was used for each group of similar conditions. Disease names are presented in red and genes in bold and italics. Mode of inheritance is expressed when adequate; if not expressed, the default mode of transmission is autosomal recessive. Clinical features that point to several diseases are presented in italics before the disease names.

I. Immunodeficiencies affecting cellular and humoral immunity (b) Combined Immunodeficiencies Generally Less Profound than Severe Combined Immunodeficiency

Low CD4:	Low CD8	Low Bc:	lg : often NL	lg Low	Normal Ig but Poor
MHCII Expression Absent : MHC-II def. RFXANK,CIITA, RFXS, RFXAP	Present: XL MAGT1 def. MAGT1. AR, LCK def. LCK. Immune dysregulation,	DOCK8 def. DOCK8.Severe Eczema. Cutaneous viral and staphylococcal infections; severe atopy; cancer, diathesis. High IgE, Low IgM, eosinophilia. Low NK with poor function. Low CD27+ memory Bc Poor peripheral Bc tolerance.	CD3y def. CD3G TCR low. RHOH def. RHOH. HPV infection, lung granulomas, molluscum contagiosum, lymphoma. Low naïve T cells, restricted repertoire, poor proliferation to CD3.	DOCK2 def. DOCK2. Low Tc; NL NK but defective function. Poor interferon responses in hematopoietic and non-hematopoietic cells. IgG NL or low; poor antibody responses. CARD11 deficiency (LOF). CARD1. Pneumocystis jirovecii pneumonia, bacterial & viral infections .lg:Absent/low.Tc:NL number, poor proliferation	Specific Antibody response IL21R def . <i>IL21R</i> . Recurrent infections; Pneumocystis, Cryptosporidium. Tc: low cytokine production; poor antigen
Diarrhea, respiratory infections, liver/biliary tract disease	autoimmunity. Low Treg, restricted T cell repertoire, poor TCR signaling; AD :UNC119 def. UNC119	MST1 def. STK4.Intermittent neutropenia; bacterial, viral (HPV), candidal infections; EBV lymphoproliferation; autoimmune cytopenias; lymphoma; congenital heart disease. Low T and B. High lg. Low terminal differentiated effector	TCRα def .TRAC. Recurrent viral, bacterial, fungal infections; immune dysregulation and autoimmunity; diarrhea. Absent TCRαβ; all Tc are γδ; poor proliferation.	BCL10 def. BCL10. Recurrent bacterial and viral infections, candidiasis, gastroenteritis. Low memory T and Treg cells, poor Ag and anti-CD3 prolif. Decreased memory and switched Bc IKBKB def. IKBKB. Recurrent bacterial, viral and	proliferation. MALT1 def. MALT1. Bacterial, fungal and viral infections. Impaired Tc proliferation and antibody response
CD8 def . CD8A Maybe asymptomatic.	CD8 Absent.	International control of the second sec	BCL11B deficiency. BCL11B. AD. Congenital abnormalities: neonatal teeth, dysmorphic facies; absent corpus callosum;	fungal infections. Opportunistic infections. Bc : poor fonctions. absent Treg and γδ T cells; impaired TCR activation. ICOS def. ICOS. Autoimmunity, gastroenteritis, granulomas (CVID).	
NI MHC I on lymphocyt ZAP-70 def. ZAP70 Ma dysregulation, autoimr fonction	y have immune	NIK def. MAP3K14. Bacterial, viral and Cryptosporidium infections. Low NK and Ig levels. Low switched memory Bc. Tc :Ag	neurocognitive deficits. Tc : Low, poor proliferation. OX40 def. OX40. Kaposi's sarcoma, impaired	TFRC deficiency. TFRC. Neutropenia, thrombocytopenia. Bc:NI number, low memory Bc. Tc: NI number, poor proliferation .	
Absent MHC I on lymphocytes. MHC-I def . TAP2, TAP1 or TAPBP Vasculitis, pyoderma gangrenosum. NI Ig. B2M Sinopulmonary infections, cutaneous granulomas. NI Ig. Hypoprotidemia. Absent β2m associated proteins MHC-I, CD1a, CD1b, CD1c.		Moesin def. MSN. XL, Recurrent infections with bacteria, varicella; neutropenia. Low Ig over time. Tc: defective migration, proliferation.	Kappols - sarcona, Impared         immunity to HHV8. Low         memory Bc. Tc : low Ag         specific memory CD4+.         LAT def . LAT.         Adenopathy,         splenomegaly,         autoimmunity. High Ig .         T and B : NL to low	RelB deficiency.RELB.Tc:poor diversity, poor function CD40 ligand def. (CD154). XL, CD40LG. or CD40 def. AR, CD40. Opportunistic infections, biliary tract and liver disease, <i>Cryptosporidium</i> . HIGM. Neutropenia, thrombocytopenia, hemolytic anemia, IgM normal or high, other Ig isotypes low. Bc: sIgM*, IgD* cells present, absent sIgG*, IgA* and IgE* cells. Tc: NL to low.	

**Fig. 2 a, b** CID with associated or syndromic features. Ab: antibody; AD: autosomal dominant transmission; ANA: anti-nuclear antibodies; ANCA: anti-neutrophil cytoplasm antibodies; AR: autosomal recessive transmission; Bc: B cells; BCG: Bacillus Calmette-Guerin; BCR: B cell receptor; CD: cluster of differentiation; CMV: cytomegalovirus; CNS: central nervous system; def: deficiency; DNA: desoxyribonucleic acid; DKC: dyskeratosis congenita; EDA: anhidrotic ectodermal dysplasia; GOF: gain-of-function; HIES: hyper IgE syndrome; FILS: facial

dysmorphism, immunodeficiency, livedo and short stature; ID: immunodeficiency; Ig: immunoglobulins; IUGR: intrauterine growth retardation; LOF: loss-of-function; MDS: myelodysplasia; NI: normal; NK: natural killer; PHA: phytohemagglutinin; PPS: polysaccharides; SCID: severe combined immunodeficiency; sd: syndrome; Tc: T cells; TCR: T cell receptor; TREC: T cell receptor excision circle; XL: X-linked transmission

IIb. CID with associated or syndromic features					
Hyper-IgE syndromes (HIES)	Dyskeratosis congenita (DKC) Myelodysplasia, defective	Defects of Vitamin B12 and Folate Metabolism:	Anhidrotic Ectodermodysplasia with ID	Others	
AD-HIES (Job sd). STAT3, LOF. Distinctive facial features (broad nasal bridge); bacterial infections (boils and pulmonary abscesses, pneumatoceles) due to S. <i>aureus</i> ,	telomere maintenance Exclude other causes: Fanconi anemia, Blackfan-Diamond Dyskeratosis congenita. IUGR, microcephaly, nail dystrophy, sparse scalp hair and eyelashes; polikloderma or abnormal skin pigmentation; palmar hyperkeratosis; premalignant oral leukoplakia; pancytopenia; +/- recurrent infections. A severe phenotype with developmental delay and cerebellar hypoplasia known as Hoyeraal-Hreidarsson Syndrome (HHS) may occur in some patients. Ig and Bc: variable. DKC1: XL, Bc and Tc: Progressive decrease. NOLA2 (MHP2), NOLA3 (NOP10): AR, Tc: Decreased. RTEL1 : AD/AR, Tc: Decreased. TERC, TINF2: AD, Tc: variable. TERT, TP1: AD/AR, Tc: variable. DCLRELB/SINMI/APOLLO, PARN, WRAP53: AR, Tc: variable. COATS plus Sd. Intracranial calcification, abnormal telomeres, IUGR, gastrointestinal hemorrhage due to vascular ectasia, hypocellular bone marrow. pancytopenia STM1: premature aging, CTC1 : sparse graying hair, dystrophic nails, osteopenia, retinal telangiectasia SAMD9. AD. SAMD9 (GOF) : IUGR with gonadal abnormalities, adrenal failure, MDS with chromosome 7 aberrations, predisposition to infections, enteronalth, abeat calean	Megaloblastic anemia, lg: decreased. Transcobalamin 2 deficiency. TCN2. pancytopenia, if untreated for prolonged periods results in intellectual disability. Deficiency causing hereditary folate malaborbiton. SLC46A1. if untreated for prolonged periods results in intellectual disability Methylene- tetrahydrofolate	Aminal Declaration     Aminal Declaration       Amina Participation     Aminal Declaration       alamin 2     Aminal Declaration       Aminal Visplasia, variable     (bacteria, mycobacteria, viruses)       and in a     id disability.       If for prolonged     Some with elevated IgA, IgM, poor specific antibody to polysaccharide antigens. Bc: NJ, Low memory and isotype       solid sability     Some with elevated IgA, IgM, poor specific antibody to polysaccharide antigens. Bc: NJ, Low memory and isotype       ee     TCR activation impaired.       ofolate     EDA-ID due to IKBA GOF       enase 1     Decreased IgA, IgM, poor specific antibody to polysaccharide antigens. Bc: NJ, Low memory and isotype       rease 1     TCR activation impaired.       V/stis jirovecii, nin, s. seizures, antibody responses, absent antibody to polysaccharide antigens. Bc: NJ, Low memory and isotype	Purine nucleoside phosphorylase deficiency. PNP. Autoimmune hemolytic anemia, neurological impairment. Hypouricemia. Ig: NI/Low. Bc: NI. Tc: Progressive decrease	
Aspergillus, Pneumocystis firovecii; eczema; mucocutaneous candidiasis; hyperextensible joints, osteoporosis and bone fractures, scoliosis, retention of primary teeth; aneurysm formation lg.člevated IgE; specific antibody production decreased. Bc:Normal; reduced switched and non-switched memory				ID with multiple intestinal atresias. TTC7A . Bacterial (sepsis), fungal, viral infections, multiple intestinal atresias, often with intrauterine polyhydramnios and early demise, some with SCID phenotype. Markedly decreased IgG, IgM, IgA. Bc:NI/low.Tc: Variable/absent, Jow TRECs.	
Bc; BAFF expression increased. Tc:N overall; Th-17 and T-follicular helper cells decreased.				Hepatic veno-occlusive disease with immunodeficiency (VODI). SP110. Hepatic veno-occlusive disease, Pneumocystis jirovecin pneumonia, CMV, candida, thrombocytopenia, hepatosplenomegaly, cerebrospinal leukodystrophy. Decreased IgG, IgA, IgM, absent germinal centers and tissue plasma cells. Decreased memory Bc . Decreased memory Tc.	
Comel Netherton sd. SPINKS; Congenital ichthyosis, bamboo hair;,atopic diathesis; increased bacterial infections. Elevated IgE and IgA; Other Ig: variably decreased. Bc: Switched and non-switched Bc are reduced.		dehydroloide dehydrogenase 1 deficiency. MTHFD1.Recurrent bacterial infection, Pneumocystis jirovecii, neutropenia, seizures, intellectual disability,			
PGM3 deficiency. PGM3. Severe atopy; autoimmunity; Immuno- osseous dysplasias. Recurrent pneumonia, recurrent skin abscesses,bacterial and viral infections; cognitive impairment;		cy. PGM3. Severe munity; Immuno- sias. Recurrent current skin terial and viral     crCl 1: Sparse graying half, dystophic trans, osteopenia, retinal telangiectasia     folate-responsive, poor antibody response to conjugated polysaccharide antigens. Low Bc.     impaired BCR activation, low memory and isotype switche Bc. Normal total Tc, TCR activation impaired.	impaired BCR activation, low memory and isotype switched Bc. Normal total Tc, TCR	Vici syndrome. EPG5. Agenesis of the corpus callosum, cataracts, cardiomyopathy.skin hypopigmentation, intellectual disability, microcephaly, CMC. Ig: Decreased IgG2. Bc: Defective. Profound depletion of CD4+ cells.	
hypomyelination. Ig:NI or elevated. Elevated IgE; eosinophilla. Reduced B and memory Bc. CD8 and CD4 Tc may be decreased.	SAMD9L. AD. SAMD9L. (GOF) :Cytopenia, predisposition to MDS with chromosome 7 aberrations and progressive cerebellar dysfunction	HOIL1 deficiency. HOIL1 HOIP deficiency. HOIP1	oinflammation, amylopectinosis.Bc: Ni I (RBCK1). Poor antibody responses to (RNF31). Lymphangiectasia. Ig: decrea	polysaccharides. sed.	
dysfunction       Calcium Channel Defects. Autoimmunity, EDA, non-progressive myopathy. Ig and Bc: NI. Tc: Normal, defective TCR mediated activation. ORAI-1 deficiency. ORAI1. STIM1 deficiency. STIM1         Hennekam-lymphangiectasia-lymphedema syndrome. CCBE1. Lymphangiectasia and lymphedema with facial abnormalities and other dysmorphic features. Ig: decreased. Bc and Tc: Variable.         STAT5b deficiency. STAT5b. Growth-hormone insensitive dwarfism, dysmorphic features, eczema, lymphocytic interstitial pneumonitis, autoimmunity.					

Kabuki Sd. Typical facial abnormalities, cleft or high arched palate, skeletal abnormalities, short stature, intellectual disability, congenital heart defects, recurrent infections (otitis media, pneumonia) in 50% of patients. Autoimmunity may be present. Low IgA and occasionally low IgG. KMT2D (MLL2): AD. KDM6A: XL.

CD81 deficiency. CD81. Recurrent infections,	CD81 deficiency. CD81. Recurrent infections, may have glomerulonephritis.		
TACI deficiency. TNFRSF13B (TACI). AD or AR	TACI deficiency. TNFRSF13B (TACI). AD or AR . Variable clinical expression		
BAFF receptor deficiency. TNFRSF13C (BAFF-	R). Variable clinical expression. Low IgG and IgM.	NFKB2 deficiency. NFKB2. AD. Recurrent	
TWEAK deficiency. TWEAK (TNFSF12). AD. Provide Addition of the second se	sinopulmonary infections, alopecia and endocrinopathies (ie, central adrenal insufficiency). Low Bc.		
Mannosyl-oligosaccharide glucosidase defici neurologic disease, also known as congenita	<b>IKAROS deficiency.</b> <i>IKZF1</i> . AD. Recurrent sinopulmonary infections. Low or normal Bc		
<b>TTC37 deficiency.</b> <i>TTC37</i> . Recurrent bacteria Poor antibody response to pneumococcal vac	I and viral infections, Abnormal hair findings: trichorrhexis nodosa. ccine.	potentially reducing levels with age.           ATP6AP1 deficiency. ATP6AP1.	
<b>IRF2BP2 deficiency</b> . <i>IRF2BP2</i> . Recurrent infed Hypogammaglobulenia, absent IgA.	Hepatopathy, leukopenia, low copper. Leukopenia and hypogammagl.		

#### III. Predominantly Antibody deficiencies. b: Other Antibody deficiencies

Selective IgM deficiency. Unknown. Pneumococcal / bacterial infections. Absent serum IgM.

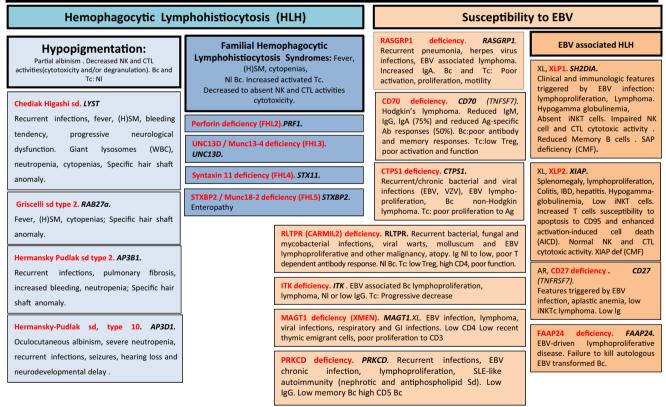

#### Serum Immunoglobulin Assays : IgG, IgA, IgM, IgE

Severe Reduction in Serum IgG and IgA with	Isotype, Light Chain, or Functional Deficiencies with Generally NI Numbers of Bc	High Bc numbers due to constitutive NF-ĸB activation
NI/elevated IgM and Normal Numbers of Bc : Hyper IgM Syndromes	Selective IgA deficiency. Unknown. Bacterial infections, autoimmunity mildly increased. Very low to absent IgA with other isotypes normal, normal subclasses and specific antibodies.	CARD11 GOF . CARD11. AD. BENTA syndrome
AID deficiency. AICDA. Bacterial infections, enlarged lymph nodes and germinal centers.	Transient hypogammaglobuliemia of infancy. Unknown. Usually not associated with significant infections, normal ability to produce antibodies to vaccine antigens. IgG and IgA decreased.	Splenomegaly, lymphadenopathy,
UNG deficiency. UNG. Enlarged lymph nodes and germinal centers.	IgG subclass deficiency with IgA deficiency. Unknown. Recurrent bacterial infections. Reduced IgA with decrease in one or more IgG subclass.	poor vaccine responses.
INO80. INO80 . Severe bacterial infections.	Isolated IgG subclass deficiency. Unknown. Usually asymptomatic, a minority may have poor antibody response to specific antigens and recurrent viral/bacterial infections. Reduction in one or more IgG subclass.	
MSH6. MSH6 . Family or personal history of cancer. Variable IgG, defects, increased IgM in some, NI Bc, low switched	Specific antibody deficiency with normal Ig levels and normal B cells. Unknown. Reduced ability to produce antibodies to specific antigens. Ig: NI.	
memory Bc.	Ig heavy chain mutations and deletions. Mutation or chromosomal deletion at 14q32. May be asymptomatic. One or more IgG and/or IgA subclasses as well as IgE may be absent.	
	Kappa chain deficiency. <i>IGKC</i> . Asymptomatic. All immunoglobulins have lambda light chain.	

Fig. 3 Predominantly antibody deficiencies. a Hypogammaglobulinemias. b Other antibody deficiencies. AD: autosomal dominant transmission; AR: autosomal recessive transmission; Bc: B cells; BENTA: B cell expansion with NF-κB and T cell anergy; CD: cluster of differentiation; CMF: flow cytometry; COPD: chronic obstructive pulmonary disease; def: deficiency; EBV: Epstein Barr virus; GOF: gain-of-function; Hx: patient history; Ig: immunoglobulins; NI: normal; XL: X-linked transmission

**Compliance with Ethical Standards** 

**Fig. 4** Diseases of immune dysregulation. **a** Hemophagocytic lymphohistiocytosis. **b** Other diseases of immune dysregulation. Ab: antibody; AD: autosomal dominant transmission; Ag: antigen; ALPS: autoimmune lymphoproliferative syndrome; APS: autoimmune polyendocrinopathy syndrome; AR: autosomal recessive transmission; Bc: B cells; CD: cluster of differentiation; CMF: flow cytometry; CTL: cytotoxic T lymphocytes; def. deficiency; DNT: double negative T cells; EBV: Epstein

Barr virus; FHL: familial hemophagocytic lymphohistiocytosis; GOF: gainof-function; HLH: hemophagocytic lymphohistiocytosis; (H)SM: (hepato)splenomegalia; IBD: inflammatory bowel disease; Ig: immunoglobulin; IL-10: interleukin-10; LOF: loss-of-function; iNKT: invariant NKT cells; NK: natural killer cells; NI: normal; sd: syndrome; SLE: systemic lupus erythematous disease; Tc: T cells; TCR: T cell receptor; XL: X-linked transmission

IV. Diseases of immune dysregulation. b: Sd with Autoimmunity and Others					
	Syndro	mes with Autoimmunity		Immune Dysregulation with Colitis:IBD , NI Tc & Bc	
	Increased CD4 <sup>-</sup> CD8 <sup>-</sup>	TCR $\alpha/\beta$ (double negative (DN) T cells) ?
