August 1, 2012

1   Introduction

Purpose   This is a formal proposal to encode the Siddham script in the Universal Character Set (ISO/IEC 10646). It replaces "Preliminary Proposal to Encode Siddham in ISO/IEC 10646" (N4185 L2/12-011R). The proposed encoding is a collaborative effort between the Script Encoding Initiative (SEI) at the University of California, Berkeley and the Shingon Buddhist International Institute, Fresno, California.

Principles of the Encoding   Siddham is a Brahmi-based writing system that originated in India, which at present is used primarily in East Asia. It is associated nowadays with esoteric Buddhist traditions in Japan. The technical description for Siddham given here may differ from the traditional analysis and philosophical interpretations of the script and its constituent characters and glyphs. Siddham is structurally an Indic script and its proposed encoding adheres to the UCS model for Brahmi-based writing systems, such as Devanagari and similar scripts. An attempt has been made to encode all distinct characters attested in Siddham records, although more characters may be uncovered through additional research. The characters that are proposed for encoding have been analyzed in accordance with the character-glyph model of the UCS. As a result, the proposed encoding may contain characters that are not part of traditional character repertoires. It may also exclude characters that are traditionally regarded as independent letters, such as conjuncts, which are to be represented in the manner specified by the UCS encoding model for Indic scripts.

Script Name   The script is assigned the name 'Siddham'. It is also known as 'Siddhamātr̥kā' and 'Kuṭila', which are specified as aliases in the names list. It has been suggested that 'Siddhamatrika' is more suitable than 'Siddham' because it broadly accommodates historical and regional forms of the script. However, the the script is most commonly known by the identifier 'Siddham'. Expert comments on the name are available in L2/12-221 and L2/12-237.

Unification   The encoding for Siddham is to serve as a unifying block for all regional variants of the script, such as 'Siddhamātr̥kā' and 'Kuṭila'. The representative glyphs are based upon Japanese forms of Siddham characters on account of active usage of the script by Japanese Buddhist communities.

Characters Proposed   A total of 72 Siddham characters is proposed for encoding, as shown in the code chart and names list (figures 1 and 2). Character names follow the UCS convention for Brahmi-based scripts. Other characters have been identified, but are not yet proposed for encoding because additional information regarding their usage is required (see Section 4).

Allocation   The Siddham block is allocated to the Supplementary Multilingual Plane (SMP) at the range U+11580..U+115FF.

Font   Representative glyphs are based upon the 'Tenchiji' font designed by the Shingon Buddhist International Institute with assistance from Lee Collins and Peter Lofting. The present author has added new glyphs and made some modifications to existing glyphs.

2   Background

The Siddham script (सि द्धं *siddhaṃ*, सि द्धां *siddhāṃ*; Sans. सिद्धं *siddhaṃ*; Chi. 悉曇文字 *xītán wénzì*; Jap. 悉曇 *shittan*; Kor. 실담 *siltam*) is a Brahmi-based script historically used for writing Sanskrit in China, Japan, and Korea. It is also known in Japan as *bonji* (梵字; Chi. *fànzì*; "Brahmā letters" < Sans. ब्रह्मा *brahmā*). At present, Siddham is used predominantly in Japan, where it is associated with the Shingon (真言) and Tendai (天台) schools of Japanese esoteric Buddhism (密教 *mikkyō*). Siddham was used for writing Buddhist manuscripts, but it is now mainly used for ceremonial and ritualistic purposes, such as the copying of *sūtra*-s and the writing of *mantra*-s and *bījākṣara*-s "seed syllables" associated with esoteric Buddhist practices. It was also used for inscriptions on statuary, amulets, and other artefacts.

Tradition states that the esoteric philosophy for Siddham was introduced in Japan in 806 by the Buddhist monk Kūkai (空海) (774–835), who learned the script in China from Prajñā (Sans. प्रज्ञा; Chi. 般若三藏 Bōrĕ Sāncáng) (734–c.810), a monk from Kashmir who served the Buddhist community of Chang'an (modern 西安 Xi'an) as an expert of Sanskrit and translator of Buddhist texts (van Gulik 1980: 114; Abe 1999: 117–119). Known better by his posthumous title Kōbō-Daishi (弘法大師), Kūkai was the founder of the Shingon ("True Word") school. Another proponent of Siddham in Japan was Saichō (最澄) (767–822), also called Dengyō-Daishi (伝教大師), who was the founder of the Tendai school.

There are several regional forms of Siddham. The Japanese form is described here and it is presented as the normative form for the encoding. In Japan, Siddham calligraphy is classified as 'formal' or 'informal' based upon the implement used for writing. The 'formal' script is written using a wooden stylus called *bokuhitsu* (木筆; Chi. *mù-bĭ*), while the 'informal' or 'brush' style is written using the common hair-tipped *fude* (筆; Chi. 毛筆 *máo-bĭ*). The 'formal' and 'informal' styles of letters are shown in figures 12–17. The forms of Siddham letters used in Korea (see figures 21–26) differ significantly from those of Japanese and Chinese Siddham. However, given the close relationships between the regional forms and their identities as 'Siddham', it is practical to unify these variants with the proposed script block.

Siddham is most closely related to Sharada (see tables 1 and 2), a Brahmi-based script that originated in Kashmir and that was used throughout northwestern India for producing manuscripts and inscriptions (see Pandey 2009). The use of Sharada spread from India into Central Asia and travelled from there to China with Buddhist monks. Although there are not many records in Central Asian Siddham, an example of it is found on the palm-leaf manuscripts of the Hōryū-ji (法隆寺) temple in Nara, Japan (see figure 6), which were brought there from China in 609. Unlike Siddham written with the *bokuhitsu* or *fude*, the Siddham letters on the Hōryū-ji manuscripts were written with the typical Indian reed-pen. A detailed palaeographical description of the Siddham of these manuscripts was presented by Georg Bühler (1884).

3   Writing System

3.1   Structure

The general structure (phonetic order, *mātrā* reordering, use of *virāma*, etc.) of Siddham is similar to that of Devanagari.

3.2   Directionality

Siddham is written hozitonally left-to-right and also vertically top-to-bottom with lines proceeding from right-to-left. See figure 5 for an example of text written top-to-bottom.
3.3   Virāma

The Siddham sign ◌੍ VIRAMA is identical to the corresponding character in Devanagari. It is used for silencing the inherent vowel of a consonant. The default rendering of VIRAMA is as a visible sign. The VIRAMA is known in Sanskrit as हलन्त *halanta* and in Japanese as 悍達点 *tatatsu-ten*.

3.4   Vowel Letters

Fourteen vowel letters are proposed for encoding:

珂	A	ꙅ	U	ꙶ	VOCALIC L	ꙸ	O
珂	AA	ꙅ	UU	ꙶ	VOCALIC LL	ꙸ	AU
꙳	I	ꙩ	VOCALIC R	ꙴ	E		
꙳	II	ꙩ	VOCALIC RR	ꙵ	AI		

Encoding Order   The encoding order for vowel signs follows that of Brahmi-based scripts in the UCS. In the Japanese arrangement for Siddham, the vocalic letters appear at the end of the vowel order.

Graphical variants   Variant forms of vowel letters are attested, eg. 珂 AA is also written as 珂 (see figure 12). These are to be managed through fonts.

3.5   Vowel Signs

Eleven dependent vowel signs are proposed for encoding:

◌ꙻ	VOWEL SIGN AA	◌	VOWEL SIGN UU	◌	VOWEL SIGN AI
◌	VOWEL SIGN I	◌	VOWEL SIGN VOCALIC R	◌ꙻ	VOWEL SIGN O
◌ꙻ	VOWEL SIGN II	◌	VOWEL SIGN VOCALIC RR	◌ꙻ	VOWEL SIGN AU
◌	VOWEL SIGN U	◌	VOWEL SIGN E		

3

Unattested vowel signs   Dependent forms of ၅ ᴠᴏᴡᴇʟ ʟᴇᴛᴛᴇʀ ᴠᴏᴄᴀʟɪᴄ ʟ and ၅ ᴠᴏᴡᴇʟ ʟᴇᴛᴛᴇʀ ᴠᴏᴄᴀʟɪᴄ ʟʟ are as of yet unattested. Space has been reserved in the code chart in the event that additional research uncovers such characters.

Encoding Order   The encoding order for vowel signs follows that of Brahmi-based scripts in the UCS. In the Japanese arrangement for Siddham, the signs for the vocalic letters appear at the end of the vowel-sign order.

Graphical variants   There are glyphic variants of vowel signs (see figures 12 and 19), which are to be managed through fonts. One of the most common variants is the use of ◌̊ for ◌̊ ᴠᴏᴡᴇʟ sɪɢɴ ᴀɪ.

Alternate forms   There is an alternate form for ᴠᴏᴡᴇʟ sɪɢɴ ᴠᴏᴄᴀʟɪᴄ ʀʀ. Normally, this sign is written as ◌̣. The two-part form ◌̣ᴸ is also attested; it is a combination of ◌̣ ᴠᴏᴡᴇʟ sɪɢɴ ᴠᴏᴄᴀʟɪᴄ ʀ and ◌ᴸ ᴠᴏᴡᴇʟ sɪɢɴ ᴀᴀ, in which the latter sign acts as a vowel-length mark.

3.6 Vowel-Modifier Signs

Three vowel-modifier signs are proposed for encoding:

1. ◌̇ sɪɢɴ ᴀɴᴜsᴠᴀʀᴀ   This sign indicates nasalization.

2. ◌̐ sɪɢɴ ᴄᴀɴᴅʀᴀʙɪɴᴅᴜ   This signs indicates nasalization.

3. ◌: sɪɢɴ ᴠɪsᴀʀɢᴀ   This sign represents post-vocalic aspiration (/h/). In Sanskrit phonology, it indicates an allophone of ᴚ sᴀ or ᴛ ʀᴀ in word-final position.

Ordering of multiple signs   In certain cases, such as when writing 'seed syllables', a base letter that is combined with the signs ᴀɴᴜsᴠᴀʀᴀ or ᴄᴀɴᴅʀᴀʙɪɴᴅᴜ may also be combined with the sign ᴠɪsᴀʀɢᴀ, eg. ᾄ: or ᾄ: *āṃḥ*. In such cases the ᴠɪsᴀʀɢᴀ is written last: <ᴚ ᴀᴀ, ◌̐ ᴄᴀɴᴅʀᴀʙɪɴᴅᴜ, ◌: ᴠɪsᴀʀɢᴀ> → ᾄ: *āṃḥ*. Rendering engines should recognize such sequences of combining marks as valid.

3.7 Consonants

Thirty-three consonant letters are proposed for encoding:

ᴋ	KA	ᴊ	NYA	ᴅ	DHA	ᴸ	LA
ᴋ	KHA	ᴄ	TTA	ᴎ	NA	ᴠ	VA
ᴳ	GA	ᴏ	TTHA	ᴘ	PA	ᴥ	SHA
ᴳ	GHA	ᴅ	DDA	ᴩ	PHA	ᴪ	SSA
ᴺ	NGA	ᴅ	DDHA	ᴃ	BA	ᴚ	SA
ᴄ	CA	ᴍ	NNA	ᴃ	BHA	ᴴ	HA
ᴄ	CHA	ᴛ	TA	ᴍ	MA		
ᴊ	JA	ᴱ	THA	ᴅ	YA		
ᴊ	JHA	ᴅ	DA	ᴛ	RA		

4

Each consonant bears the inherent vowel /a/, represented by 𑖀 A, which is silenced using ◌ VIRAMA. Variant forms of consonants are attested (see figures 13–17); these are to be managed at the font level.

3.8   NUKTA

The sign ◌ NUKTA is used for transcribing sounds for which distinct characters do not natively exist in the writing system (see figure 43). The NUKTA is not a traditional Siddham character, but it is part of 現代悉曇 *gendai shittan* "modern Siddham", which is an extension of Siddham that accommodates the writing of Japanese and English. The name of the character is derived from the Arabic word نقطة *nuqṭah* = *nukta* "dot" and corresponds to characters such as ◌ U+093C DEVANAGARI SIGN NUKTA.

The NUKTA is generally written with a letter that has the closest phonetic proximity to the target sound. For example, in figure 44 it is shown combined with 𑖕 JA (/dʒ/) for representing /z/. The NUKTA is always combined with the letter that it modifies. When it occurs with a consonant that is also combined with a vowel sign, then NUKTA is written immediately after the consonant, eg. <𑖕 JA, ◌ SIGN NUKTA, ◌ VOWEL SIGN U> → 𑖕 *zu*. Its positioning with regard to the base letter depends upon the shape of the letter and the presence of any below-base vowel signs.

3.9   Consonant Conjuncts

Consonant clusters in Siddham are written as conjuncts and follow the same model as conjuncts in Devanagari. Conjuncts are represented using VIRAMA, which is written after each consonant in a cluster. They may be written vertically, horizontally, and as independent ligatures.

There are traditional Chinese and Japanese tabulations for Siddham conjuncts. One such classification system was described in the manual *Xītán Zìjì* (悉曇字記) by the Chinese monk Zhì-guǎng (智廣) (d. 806), who organized the various combinations of Siddham consonant clusters into eighteen categories (see figure 45). Examples of several conjuncts are shown in figures 46–61.

Shaping   The shapes of some consonants change when they occur in conjunct-initial position (eg. 𑖎 KA → 𑖎; 𑖨 RA → ◌ *repha*), some are written using post-base forms when they are non-initial (eg. 𑖧 YA → ◌). These ligating forms are illustrated in figures 13–17 (column labeled "in combination") and figures 19–20.

Depth   Siddham conjuncts may represent clusters with large numbers of consonants. For example, a conjunct of six consonants is 𑖨 *rkṣvrya*, which is produced using the sequence <𑖨 RA, ◌ VIRAMA, 𑖎 KA, ◌ VIRAMA, 𑖬 SSA, ◌ VIRAMA, 𑖪 VA, ◌ VIRAMA, 𑖨 RA, ◌ VIRAMA, 𑖧 YA>.

Special Conjuncts   The glyphs 𑖎 *kṣa* and 𑖩 *llaṃ* are often shown as independent letters in Siddham charts. The *kṣa* represents conjuncts of different consonant letters and *llaṃ* represents conjuncts of geminate consonants. Based upon the UCS encoding model, they are not independent letters, but conjuncts. They are to be represented using the following sequences: 𑖎 = <𑖎 KA, ◌ VIRAMA, 𑖬 SSA> (compare Devanagari क्ष *kṣa* = <क KA, ◌ VIRAMA, ष SSA>); 𑖩 = <𑖩 LA, ◌ VIRAMA, 𑖩 LA, ◌ ANUSVARA>.

Default Representation   It is expected that a basic Siddham font will contain the necessary glyphs for properly representing conjuncts. A consonant cluster is depicted with the appropriate conjunct glyph only if such a glyph is available in the font. If the conjunct glyph is unavailable, the bare consonants in the cluster are depicted using their full forms combined with a visible VIRAMA. While these depictions of conjuncts may not be used in Siddham orthography, they are necessary for the representation of the script in plain text. In

order to render Siddham text appropriately in the absence of distinct glyphs for any possible conjunct, it is recommended that a set of condensed forms of letters in conjunct-initial and non-initial positions be available so that arbitrary conjuncts may be rendered in the vertical orientation used in Siddham orthography.

3.10   Consonant-Vowel Combinations

Vowel signs combine with consonant letters and conjuncts as in Devanagari. Some consonant shapes are modified when they are written with vowels (eg. ☉ KA → ☉ when combining with ☉ VOWEL SIGN U: ☉ *ku*). Some vowel signs are written as contextual forms when they occur with certain consonants. For example, ☉ VOWEL SIGN U → ☉ and ☉ VOWEL SIGN UU → ☉ when combined with ☉ NGA, ☉ JA, ☉ TTA, ☉ TTHA, ☉ DDHA, ☉ NA, ☉ PA, ☉ VA. These signs have specific forms when written with ☉ RA: ☉ *ru* and ☉ *rū*.

3.11   Head Marks

The ☉ SIGN SIDDHAM is written at the beginning of a text (see figures 6 and 38). Palaeographically, the sign corresponds to characters used in other scripts, such as ☉ U+0FD3 TIBETAN MARK INITIAL BRDA RNYING YIG MGO MDUN MA. It represents the Sanskrit word सिद्धम् *siddham* "accomplished" and the phrase सिद्धिरस्तु *siddhirastu* "may there be success". The sign is often glossed as '*oṃ*' (see figure 27). There is a vertically-oriented glyphic variant: ☉ (see figure 33). In the Japanese tradition, SIDDHAM is analyzed as being formed from the lower portion of ☉ I.

3.12   Punctuation

Four punctuation characters are proposed for encoding:

1. ☉ DANDA   This mark is used for marking the end of sentences and other short text sections (see figures 32, 40, 41). It has a graphical variant ☉ that is used in 'informal' Japanese Siddham. The Siddham DANDA corresponds to, but is graphically distinct from, ⏐ U+0964 DEVANAGARI DANDA.

2. ☉ DOUBLE DANDA   This mark is used at the end of paragraphs and larger text blocks (see figures 32, 40, 41). It is also written with an underdot as ☉. The graphical variant ☉ is used in 'informal' Japanese writing. The Siddham DOUBLE DANDA corresponds to, but is graphically distinct from, ‖ U+0965 DEVANAGARI DOUBLE DANDA.

3. ˙ SEPARATOR-1   This sign is used for marking boundaries between syllables, words, and phrases. It is written at the head-height and is distinct from the ∙ middle dot. Usage of SEPARATOR-1 is shown in figure 38.

4. | SEPARATOR-2   This sign is used for marking boundaries between syllables, words, phrases. Its usage is shown in figures 40, 41, 42, where it appears alongside ☉ DANDA and ☉ DOUBLE DANDA.

3.13   Repetition Marks

The ☉ REPETITION MARK-1, ☉ REPETITION MARK-2, and ☉ REPETITION MARK-3 are used for indicating the repetition of text. They are written after the text intended to be repeated.

The ☉ REPETITION MARK-1 has the glyphic variants ☉ and ☉ (see figures 32, 33, 35). Based upon its graphical shape and function, it is likely that REPETITION MARK-1 is derived from an Indic digit '2' (compare Devanagari २). A common practice in manuscript traditions of northern India is to indicate the repetition of

words using digits. The digit used indicates the number of repetitions, eg. '2' for twice, '3' for thrice. As there are no attested digits for Siddham, it appears that the original link between REPETITION MARK-1 and a numeric value was forgotten and the original digit for '2' was preserved as a symbol. This explains the serialized usage of REPETITION MARK-1 in the text excerpt in figure 36 for indicating a triple reading, ie. Devanagari "हूँ २ २" instead of "हूँ ३" for *hūṃ hūṃ hūṃ*).

The ☙ REPETITION MARK-2 is used in the vertical version of the *Uṣṇīṣa Vijaya Dhāraṇī Sūtra* shown in figure 5. An excerpt of the *Sūtra* with the repetition marks highlighted is shown in figure 37. Here, the mark appears after य *ya* (3rd character), another *ya* (7th character), and र *ra* (10th character). The mark prompts the reader to parse the text as "*jaya jaya, vijaya vijaya, smara smara*". It is possible that REPETITION MARK-2 is used only in a vertical environment. This is supported by the accompanying Japanese annotation, which glosses ☙ using 〳 U+3031 VERTICAL KANA REPEAT MARK.

The ᘒ REPETITION MARK-3 is shown in several Siddham manuals. It is proposed for encoding because it is a graphically-distinct character.

3.14   Terminal Mark

The ⦂‖⦂ END OF TEXT MARK is used for indicating the end or completion of a text.

4   Characters Not Proposed for Encoding

Several characters attested in Siddham sources are not presently proposed for encoding. Additional research is needed for determining the suitability of encoding these characters, which are described below.

4.1   Conjuncts

The glyphs क्ष *kṣa* and ल्लं *llaṃ* are conjuncts and are to be represented as such (see Section 3.9).

4.2   Digits

Additional research is needed in order to determine the existence of digits in the various regional forms of Siddham. There is no traditional set of digits in Japanese Siddham; however, there are modern innovations named "Bonji numerals" (see figure 18), which resemble Devanagari forms. They may be considered for future inclusion.

4.3   Punctuation

The following punctuation-like characters are not proposed for encoding:
1. The mark ‖ः‖ is used for indicating end of text in figure 6. It appears to be composed the following sequence <२ DOUBLE DANDA, ◌ः SIGN VISARGA, २ DOUBLE DANDA>.

2. Word and phrase separation is also indicated using a ⋅ middle dot (see figure 39). This mark differs from ⋅ SEPARATOR-1 in terms of its vertical placement. It is to be written using the generic ⋅ U+00B7 MIDDLE DOT.

4.4 *Oṃ*

The syllable ओं *oṃ* is not proposed for encoding as an atomic character. It is to be represented using the sequence <ओ O, ँ CANDRABINDU> → ओं .

4.5 Ornaments

Various ornaments are used for marking the ends of sections. The following are attested in script manuals (see figures 32, 33, 35) and manuscripts (see figures 6, 39): ❀, ❀, ❀, ❀, ❀, ◎, ❂, ⁝, ⁝, ⁝, ⁝, ❀, ❀. These ornaments are decorative and do not express textual information. For this reason, they are not proposed for encoding at present. If additional information about these ornaments indicates that they possess textual value, then they may be proposed for encoding in the future.

4.6 Editorial Marks

Siddham manuscripts contain editorial marks, such as those used for indicating the insertion or deletion of text. The characters ᛫᛫᛫ and ⋯ are used for marking deletions (see figure 35). Another character is a caret-like mark that is written below the baseline to indicate the insertion of text. These editorial marks are not unique to Siddham and are used in various Indic manuscript traditions. These characters should be represented using already-encoded characters with similar functions.

4.7 Pedagogical Characters

There are several pedagogical characters used for describing Siddham letters in script manuals. Some of these are discussed below. These characters may be candidates for encoding, but additional research is required regarding their usage and suitability for encoding, as per the UCS encoding model.

Character Strokes   Siddham manuals describe elemental character strokes that are used for writing letters (see figure 65). Some of these are described below.

1. ` *myō-ten*   The stroke ` is the initial mark made when a brush is pressed upon a surface for writing any Siddham letter (see the stroke order in figures 66 and 67). It is known in Japanese as 命点 *myō-ten* "life mark". The *myō-ten* corresponds to the Chinese simple stroke ヽ (點 *diǎn* "dot"), which is encoded in the UCS as ヽ U+31D4 CJK STROKE D.

2. ‾ *a-ten*   The stroke ‾ is shown in some historical and modern Siddham handbooks as a dependent vowel sign of अ A (see figures 19, 63, 64) or as a 'variation' of the letter (see figure 12). For this reason it is called ア点 *a-ten* "*a* mark" in Japanese. It is a horizontally elongated form of ` *myō-ten*. The *a-ten* is not a true 'vowel sign', but a portion of the top-stroke of each consonant letter.

3. ˘ *gyōgatsu-ten*   The stroke ˘ is known in Japanese as 仰月点 *gyōgatsu-ten* "moon-viewing mark" and in Sanskrit as अर्धचन्द्र *ardhacandra* "half-moon". It is the foundational stroke of the sign ँ CANDRABINDU, which is produced by writing ं ANUSVARA with *gyōgatsu-ten*. The stroke is considered 荘厳 *shougon* (Sans. अलंकार *alaṃkāra*) "adornment" or "decoration" in that it does not change the phonological value of ANUSVARA. The use of *gyōgatsu-ten* is shown in figure 68, where it appears as an independent graphical element.

   Figure 13 (row 11) shows the below-base character ◡ listed along with ँ CANDRABINDU and ं ANUSVARA. What is this character? Is this the *gyōgatsu-ten*?

4. ◡ *u-ten*   The stroke ◡ is known as ウ点 *u-ten* "*u* mark" in Japanese. It is used for forming characters like ᦉ I, ᦊ U, and ᦋ UU.

5. ◯ *en-ten*   The stroke ◯ is known as 円点 *en-ten* "circle mark" in Japanese. It is used for forming characters like ◌ ANUSVARA and ◯ TTHA.

'Headless' Letters   Some Japanese treatises on Siddham offer explanations about the phonological properties of Siddham consonants by using 'headless' letters, which are the regular consonants written without the top-stroke (*myō-ten*; Sans. *mātrā*). One such work, the *Shittan Bunsho* (悉曇聞書) of Jiun Sonja (慈雲尊者) (1718–1804), expounds upon the alphasyllabic and alphabetic natures of Siddham consonants by using 'headless' letters. Jiun explains that removing the top-stroke of ᰀ KA produces the 'headless' form ᰁ in which the inherent vowel is absent: /ka/ → /k/. According to this view, the inherent vowel /a/ is contained in the top-stroke and eliminating it produces an alphabetic form of a letter. Secondly, when this 'headless' *ka* is combined with a ◌ VIRAMA as ᰂ, the remaining consonantal value is removed: /k/ → Ø. In this case, the VIRAMA essentially eradicates the entire letter. A table of 'headless' letters is given by Jōgon (淨嚴) (1639–1702) in his *Shittan Sanmitsushō* (悉曇三密鈔), which is presented here in figure 62. While 'headless' forms of Siddham consonants are required for accurately representing Jiun's *Shittan Bunsho*, they are to be considered as glyphic variants of regular letters and are to be managed through fonts.

4.8   *Bījākṣara-s*

A *bījākṣara* or *bīja* "seed syllable" may be written such that the constituent characters are joined to form a highly-stylized ligature (see figures 70, 71, 72, 73). For example, the word ᰣᰤ *phaṭ* (<ᰣ PHA, ᰤ TTA, ◌ VIRAMA>) may be written as ᰥ *phaṭ* . A more complex example is a *bīja* of Acala (Sans. अचल; Chi. 不動明王 Búdòng Míngwáng; Jap. Fudō Myōō), which is a ligature formed by joining ᰦ *hāṃ* and ᰧ *māṃ*, the last two syllables of his *mantra*, into a monogram written as ᰨ or ᰩ or ᰪ *hāṃmām*.

These types of ligatures cannot be represented in plain text using characters proposed for encoding. They are calligraphic innovations and are to be managed through the application of font features or text attributes.

5   Character Data

5.1   Collation

The primary collating order for Siddham is as follows:

A < AA < I < II < U < UU < E < AI < O < AU <

VOCALIC R < VOCALIC RR < VOCALIC L < VOCALIC LL < KA < KHA <

GA < GHA < NGA < CA < CHA < JA < JHA < NYA <

TTA < TTHA < DDA < DDHA < NNA < TA < THA < DA <

DHA < NA < PA < PHA < BA < BHA < MA < YA < RA <

LA < VA < SHA < SSA < SA < HA < SIGN AA < SIGN I <

SIGN II < SIGN U < SIGN UU < SIGN E < SIGN AI < SIGN O <

SIGN AU < SIGN VOCALIC R < SIGN VOCALIC RR < VIRAMA

The following signs have secondary weights: ◌̐ CANDRABINDU, ◌̇ ANUSVARA, ◌: VISARGA, ◌̤ NUKTA.

5.2   Character Properties

Character properties given in the data format of `UnicodeData.txt`:

```

Figure 30: Description of the basic vowels, ANUSVARA, and VISARGA in the *Shittan Sanmitsushō* (from Jōgon 1682: 722). Note the several glyphic variants given for each vowel.

45
Figure 31: Description of vowel signs and the vocalic letters in the *Shittan Sanmitsushō* (from Jōgon 1682: 722).

Punctuation marks are as follows:

Figure 33: Punctuation and ornaments used in Siddham (from Tokuzan 1974: 227). Many of these are identical to those shown by Stevens (figure 32) and Kodama (figure 35). However, note here the vertical variant of ᨀ SIDDHAM.

is written at the beginning of a text

ditto mark

comma (formal)

comma (informal)

period (formal)

period (informal)
At the end of a text these marks are often used:
Figure 32: Punctuation and ornaments used in Siddham (from Stevens 1981: 41).

47
Figure 34: Description of an invocation sign, punctuation marks, ornaments, a variant form of VIRAMA, a deletion mark, and repetition marks in the *Shittan Sanmitsushō* (from Jōgon 1682: 724). Note the enumeration of various ornaments.

記号

① 怛達（たつ）（生の画）。母音符（a）を除いた子音字（半体文）を作るときに体文の下部につける。

② 文頭に書く。ｉ字の省略。

③ 句末。読点にあたる。ma字の省略。

④ 文末。句点にあたる。da字の省略。

⑤ 畳句（じょうく）（同じ言葉をくり返すときに用いる）。cha字の省略。na・字の省略。

⑥ 減滅点（書き損じたときに、文字の上あるいは下にこの記号を符す）。

⑦ 文章の終りに符す。am・字の省略。

⑧ 文章の終りに符す。ah・字の省略。

Figure 35: Punctuation and ornaments used in Siddham (from Kodama 1991: 222). Column (1) forms of VIRAMA; (2) the SIDDHAM sign; (3) the 'informal' DANDA; (4) the 'informal' DOUBLE DANDA; (5) the three repetition marks; (6) deletion marks; (7) ornaments used at the end of a text section; (8) a sign used at the end of text.

Figure 64: The ˋ *myō-ten* shown as the dependent form of 𑖀 ᴠᴏᴡᴇʟ ʟᴇᴛᴛᴇʀ ᴀ (from Tokuzan 1974: 226).

筆法基本

| 7	6	5	4	3	2	1

命点　梵字を書くときは先ず筆を落して一点をうつ。これを阿字命点（略して命点）という。すべての字は阿字の変現であることを表わす。また阿字の点画とも考えられる。命点をうたない梵字は「ただの梵字」で悉曇ではないといわれて来た。

横画（第一画）　命点に続けて書く。命点をうち、筆先を離さずに少し斜上にあげ、命点にかぶせるように筆をおろし、横に一の字を引く。（早書の場合は、命点から斜上にあげた筆をすぐにおろさず、右に引きながら下げる。）

竪画　筆をおろし（命点ではない）軽く左斜下に押し下げ、筆の終るところを見定めてから、まっすぐに引きおろす。Ａ終りを止めるときは筆全体を内側に押しつけ、Ｂ引くときは右斜下へ引きながらゆっくり筆をおさめる。（早書の場合は、左斜下へ押し下げた筆を止めずに下へ引くので、左よりとなるのを引きながら右へもどす。

鶯点　阿字の終画、ウ点。筆を向うへ倒して（掌が上を向く）一ぱいにおろし、そのまま右斜下から横へ引きながら筆をおさめる。（手首をつかわず脇を開きながら引く。）筆先が下側を通る逆筆である。竪画との連続は、下を向いて竪画を引いて来た掌が上に反って、竪画の終りに重ねて筆をおろす（上図Ｃ）。掌を下に向けたままでは下図Ｄのように竪画と点が離れ、点の形も舟のようになる。（早書の場合でも掌は横に向くくらいに反す。）なお鶯点の名は刷毛書の場合、長く引いた形が鶯の谷渡りに似ているところから出たもので、毛筆書には当らないが、昔からそのまま用いている。

雲形点　ウ点。（◎◎◎◎の下部も同じ要領）竪画の筆を一たん止め、左斜下へ押し出し、引き返して同じ角度で右斜下へ引き、丸みをつけて左へまわし、斜上へはねる。このとき筆が切れたら、筆の終るところまで筆を運び軽くおとして引き返す。（早書ならば切れたままでよい。）斜上へはねずにダラリと下へさげるのはいけない。

円点　空点、涅槃点、また〇字。宝珠形と伝えているが、それにとらわれると細長い形となる。（むしろ少し平たい方がよい。）おろした筆を左へ押し上げるくらいにして大きく割り、右へまわす。第二筆は第一筆の始点に重ねて軽く筆をおろし、左側と同形になるように右へまわして終りを合せる。（早書の場合は、第一筆を長く右わきまで引いておき、第二筆は補う程度にする。）黒点にするには第一筆を筆を倒して肉太に書き、第二筆で補えばよい。

半月形　弧線の半月形では腹がせまく、従って字が細長くなりすぎるので、初めの三分の一は斜直線、後の三分の二はゆったり丸みをつける。終りは上げない。（39字は終りを上げて竪画に続ける。）

Figure 65: Elemental Siddham strokes (from Bonji Kichō Shiryō Kankōkai 1980: 114).

Figure 67: The position of ◟ *myō-ten* in the seed-syllables for the five elements 𑖀 A, 𑀯 VA, 𑀭 RA, 𑀔 KHA, 𑀳 HA (from Tokuzan 1974: 180).
Figure 66: Stroke sequence for writing 𑖀 A using a soft brush (from Stevens 1981: 44). The initial stroke ◟ *myō-ten* is highlighted. See Section 4.7 for details on Siddham stroke characters.

69
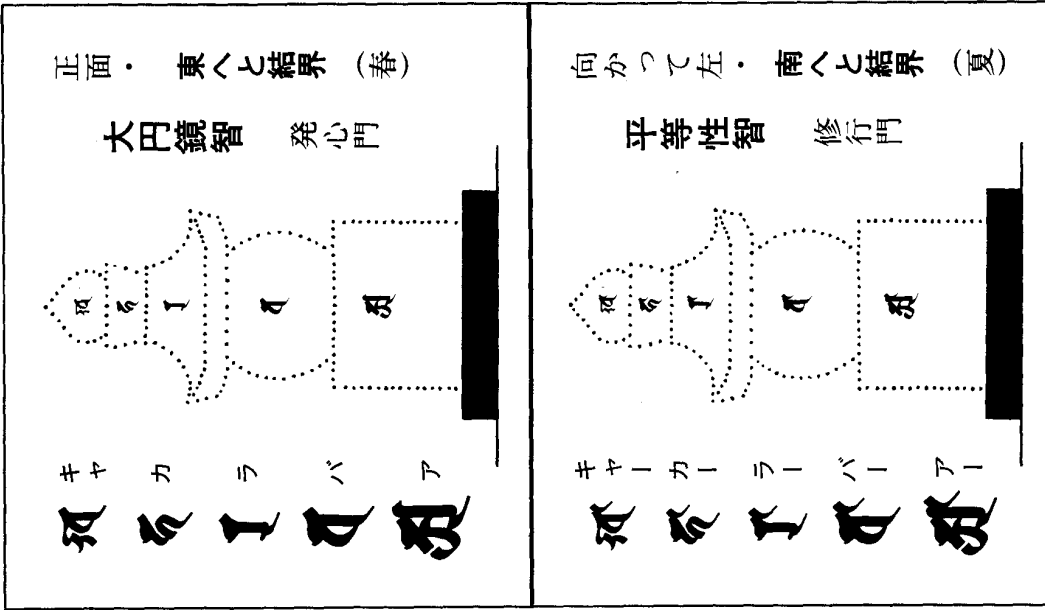

Figure 69: The seed-syllables for the five elements 𑖀 A, 𑖪 VA, 𑖨 RA, 𑖏 KHA, 𑖮 HA conceptualized as a *stūpa* (from Tokuzan 1976: 28).
Figure 68: A conceptualization of the syllable 𑖪𑀂 *vaṃ* as a *stūpa* (from Tokuzan 1976: 43). The elements from top are ं ANUSVARA, the ˘ *gyōgatsu-ten*, and 𑖪 VA.

Figure 72: Seed syllables of 梵天 Bon-ten (Brahmā), 摩利支天 Marishi-ten (Marici), and 毘沙門天 Bishamon-ten (Vaiśravaṇa) (from Kodama 2005: 99).

ISO/IEC JTC 1/SC 2/WG 2
PROPOSAL SUMMARY FORM TO ACCOMPANY SUBMISSIONS
FOR ADDITIONS TO THE REPERTOIRE OF ISO/IEC 10646[1]
Please fill all the sections A, B and C below.
Please read Principles and Procedures Document (P & P) from http://www.dkuug.dk/JTC1/SC2/WG2/docs/principles.html **for guidelines and details before filling this form.**
Please ensure you are using the latest Form from http://www.dkuug.dk/JTC1/SC2/WG2/docs/summaryform.html**.**
See also http://www.dkuug.dk/JTC1/SC2/WG2/docs/roadmaps.html **for latest** *Roadmaps.*

A. Administrative

1. **Title:** *Proposal to Encode the Siddham Script in ISO/IEC 10646*
2. Requester's name: *Script Encoding Initiative (SEI) / Anshuman Pandey <pandey@umich.edu>*
3. Requester type (Member body/Liaison/Individual contribution): *Liaison contribution*
4. Submission date: *2012-08-01*
5. Requester's reference (if applicable):
6. Choose one of the following:
   This is a complete proposal: *Yes*
   (or) More information will be provided later:

B. Technical – General

1. Choose one of the following:
   a. This proposal is for a new script (set of characters): *Yes*
      Proposed name of script: *Siddham*
   b. The proposal is for addition of character(s) to an existing block:
      Name of the existing block:
2. Number of characters in proposal: *72*
3. Proposed category (select one from below - see section 2.2 of P&P document):
   A-Contemporary **X**   B.1-Specialized (small collection)   B.2-Specialized (large collection)
   C-Major extinct   D-Attested extinct   E-Minor extinct
   F-Archaic Hieroglyphic or Ideographic   G-Obscure or questionable usage symbols
4. Is a repertoire including character names provided? *Yes*
   a. If YES, are the names in accordance with the "character naming guidelines"
      in Annex L of P&P document? *Yes*
   b. Are the character shapes attached in a legible form suitable for review? *Yes*
5. Fonts related:
   a. Who will provide the appropriate computerized font to the Project Editor of 10646 for publishing the standard?
      Anshuman Pandey and Lee Collins (Apple)
   b. Identify the party granting a license for use of the font by the editors (include address, e-mail, ftp-site, etc.):
      Lee Collins (Apple)
6. References:
   a. Are references (to other character sets, dictionaries, descriptive texts etc.) provided? *Yes*
   b. Are published examples of use (such as samples from newspapers, magazines, or other sources)
      of proposed characters attached? *Yes*
7. Special encoding issues:
   Does the proposal address other aspects of character data processing (if applicable) such as input,
   presentation, sorting, searching, indexing, transliteration etc. (if yes please enclose information)? *Yes; see text of proposal*

8. Additional Information:
Submitters are invited to provide any additional information about Properties of the proposed Character(s) or Script that will assist in correct understanding of and correct linguistic processing of the proposed character(s) or script. Examples of such properties are: Casing information, Numeric information, Currency information, Display behaviour information such as line breaks, widths etc., Combining behaviour, Spacing behaviour, Directional behaviour, Default Collation behaviour, relevance in Mark Up contexts, Compatibility equivalence and other Unicode normalization related information. See the Unicode standard at http://www.unicode.org for such information on other scripts. Also see Unicode Character Database (http://www.unicode.org/reports/tr44/) and associated Unicode Technical Reports for information needed for consideration by the Unicode Technical Committee for inclusion in the Unicode Standard.

---

[1] Form number: N4102-F (Original 1994-10-14; Revised 1995-01, 1995-04, 1996-04, 1996-08, 1999-03, 2001-05, 2001-09, 2003-11, 2005-01, 2005-09, 2005-10, 2007-03, 2008-05, 2009-11, 2011-03, 2012-01)

C. Technical - Justification

1. Has this proposal for addition of character(s) been submitted before? — *No*
   If YES explain

2. Has contact been made to members of the user community (for example: National Body, user groups of the script or characters, other experts, etc.)? — *Yes*
   If YES, with whom? — *Shingon Buddhist community, Indic script experts*
   If YES, available relevant documents:

3. Information on the user community for the proposed characters (for example: size, demographics, information technology use, or publishing use) is included? — *Yes*
   Reference:

4. The context of use for the proposed characters (type of use; common or rare) — *Common*
   Reference:

5. Are the proposed characters in current use by the user community? — *Yes*
   If YES, where? Reference:

6. After giving due considerations to the principles in the P&P document must the proposed characters be entirely in the BMP? — *N/A*
   If YES, is a rationale provided?
   If YES, reference:

7. Should the proposed characters be kept together in a contiguous range (rather than being scattered)? — *Yes*

8. Can any of the proposed characters be considered a presentation form of an existing character or character sequence? — *No*
   If YES, is a rationale for its inclusion provided?
   If YES, reference:

9. Can any of the proposed characters be encoded using a composed character sequence of either existing characters or other proposed characters? — *No*
   If YES, is a rationale for its inclusion provided?
   If YES, reference:

10. Can any of the proposed character(s) be considered to be similar (in appearance or function) to, or could be confused with, an existing character? — *Yes*
    If YES, is a rationale for its inclusion provided? — *Yes*
    If YES, reference: — *Virama, etc.; see text of proposal*

11. Does the proposal include use of combining characters and/or use of composite sequences? — *Yes*
    If YES, is a rationale for such use provided? — *Yes*
    If YES, reference: — *Dependent vowel signs, etc.; see text of proposal*
    Is a list of composite sequences and their corresponding glyph images (graphic symbols) provided?
    If YES, reference:

12. Does the proposal contain characters with any special properties such as control function or similar semantics? — *Yes*
    If YES, describe in detail (include attachment if necessary) — *Virama, etc.; see text of proposal*

13. Does the proposal contain any Ideographic compatibility characters? — *No*
    If YES, are the equivalent corresponding unified ideographic characters identified?
    If YES, reference:
