KEYWORDS

lignocellulosic biomass hydrolysate, ¹³C-fingerprinting, lignin-derived aromatics, mixed-acid fermentation, L-lactate

A Corrigendum on

[Corynebacterium glutamicum as an efficient omnivorous microbial host for the bioconversion of lignocellulosic biomass](#)

by Mhatre A, Shinde S, Jha AK, Rodriguez A, Wardak Z, Jansen A, Gladden JM, George A, Davis RW and Varman AM (2022). *Front. Bioeng. Biotechnol.* 10:827386. doi: 10.3389/fbioe.2022.827386

In the published article, there was an error in the caption of [Figure 4](#) as published. The concentrations of vanillic acid, cinnamic acid, benzoic acid and coumaric acid (mM) displayed were denoted as 40, 80, 150 mM. However, the correct concentrations are 10, 20 and 40 mM. The corrected legend appears below.

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.

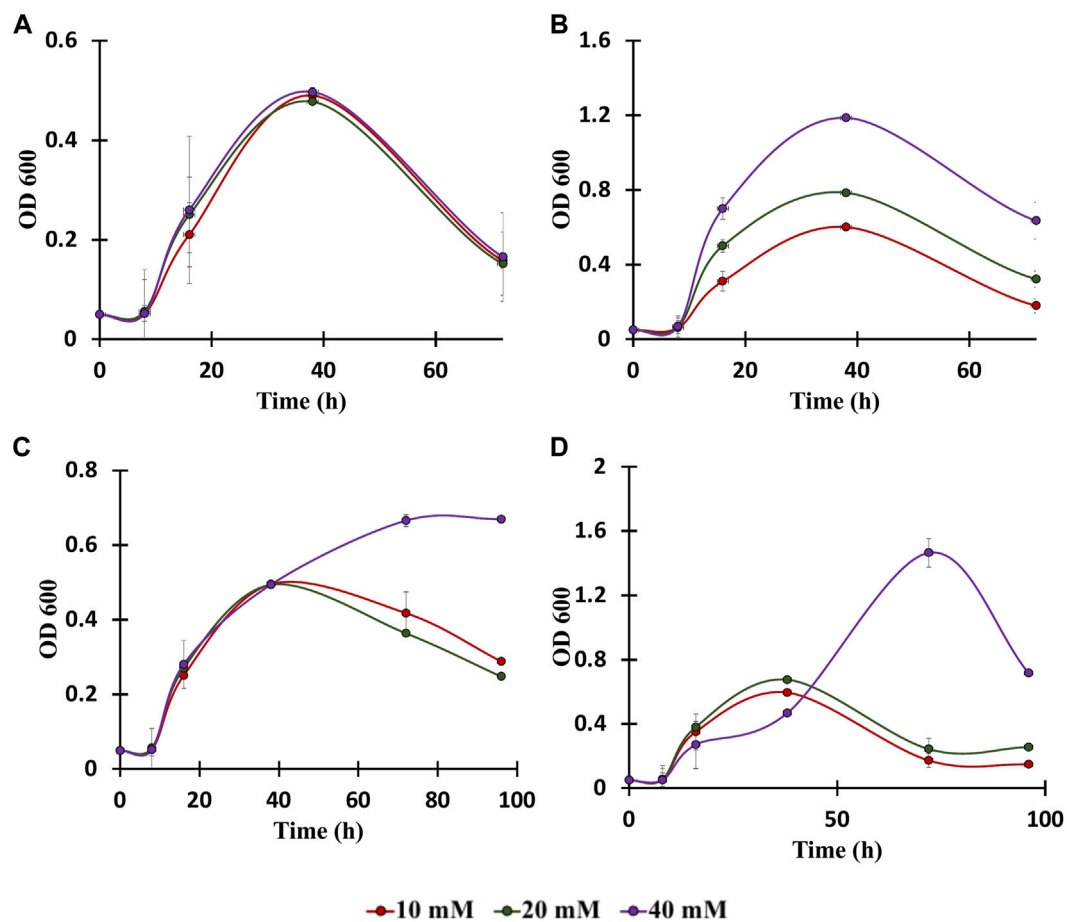

FIGURE 4

Growth assays of *C. glutamicum* in: (A) vanillic acid (10, 20, 40 mM), (B) Benzoic acid (10, 20, 40 mM), (C) Cinnamic acid (10, 20, 40 mM), and (D) p-coumaric acid (10, 20, 40 mM). The experiments were performed in biological triplicates. Data represents mean \pm SD, $n = 3$.
