Sharing Metadata: Building Collections and Communities

- Robin Chandler, UC San Diego Libraries
- Brad Westbrook, UC San Diego Libraries
- Kevin Rundblad, UCLA
- Presented at Annual Meeting of the Society of California Archivists, Riverside, CA, May 9, 2009

Libraries, archives, and museums cannot afford to think about collections only in the context of the local community. Sharing benefits our users, and we can no longer assume our users will come in through the "front door." Cultural institutions must get their content "into the flow" where working users will discover and reap the benefits of digital content delivery. The speakers in this session will describe the benefits of creating repurposable metadata discoverable in multiple environments; discuss some of the obstacles challenging institutions to create sharable metadata; compare two mechanisms for creating repurposable metadata; and share some success stories where leveraging metadata in social networking environments helped users discover the breadth and depth of an institution's collections.

Sharing Metadata: Building Collections, Community & Computing Power

Robin L. Chandler
Society of California Archivists
May 9, 2009

- **Major Theme:**

- Metadata Standards are the key to Sharing Metadata

- Repositories amass collection metadata in local databases *locked* away from the internet public in **Data Silos**

- Standardized metadata is flexible, shareable and promotes interoperability

- **Minor Theme:**

- **Tear Down your Data Silos & Share Your Metadata**

“Shareable metadata is metadata which can be understood and used outside of its local environment by aggregators to provide more advanced services”

Sara Shreeves *Moving Towards Shareable Metadata*

What's Wrong with Data Silos?

Data SILOS limit exposure of our collections to users.....

Data SILOS Freeze Innovation

- Our users are innovators
- “Innovation comes only from readily & seamlessly sharing information rather than from hoarding it” Tom Peters, author *In Search of Excellence*

Why Share Our Metadata?

- **Sharing Benefits our users**

- Data must be where users are working -- getting “Into the Flow”
- Federates distributed collections
- Supports “one-stop” searching
- Supports Web 2.0 culture and services

- **Sharing Benefits our institutions**

- Increases exposure to collections
- Broadens user base
- Increases potential for collaboration & grant seeking opportunities
- Enhances rather than limits your data

A History of Sharing:

- Knowledge
- Systems
- Standards
- Expertise

1877 – Standardization of size of catalog cards

1901 – LC catalog card distribution program

1968 – MARC

1971 – OCLC

1980 – RLIN

1987 – Z39.50

1994 – DCMI (Dublin Core Metadata Initiative)

1997 – MARC 21

1998 – EAD 1.0

2001 – OAI-PMH ; METS ; MODS

2004 - Web 2.0

2007 – OAI-ORE

Evolution of Sharing: Analog to Web 2.0

- **Analog: Sharing the Creation of Authoritative Catalog Records**

- Librarian expert creates a catalog record and shares the record with other Librarian experts

- Motives:

- Encourages shared cataloging & conserving staff resources

- Encourages cooperative collection development

- **Web 2.0: Sharing the Production of Knowledge**

- Archivist expert creates an interoperable digital object with standardized metadata and shares the object with users

- Motives:

- Increase exposure of collections

- Encourage metadata enhancement by distributed experts

- In socially networked environment, expert users enhance digital object with additional metadata. This is joint authorship using the distributed expertise of human computing power.

Key attributes to shareable metadata:

- Human understandable outside of its local context
- Provides contextual information at the object level
- Consistent across a collection: uses same data fields and same controlled vocabulary across a collection
- Easily packaged in multiple views for multiple audiences
- Machines can process
- **Uses Standards: descriptive, technical, administrative**

What is a standard?

“a description of a measurable item or process” which is agreed upon and published by recognizable standards-issuing organization such as national and international associations.”

“Standards are used to assure that communication is clear. The use of a recognized industry standard assures everyone that processes and measurements are uniform.”

Senkus, *Encyclopedia of Library and Information Science*, 2003, p. 2,737.

“Clear thinking about what we are doing with description is essential to creating useful tools and delivering them in a helpful and understandable format.”

--Michael Fox
2000 SAA Presentation

Types of Standards

Type	Definition	Example
Content	How descriptive data is expressed	DACS
Value	How descriptive content is controlled	LCNAF, LCSH, AAT
Structure	Specification of the elements of description, technical and administrative metadata and their relationship to one another	MARC, MODS, DC, VRA, MIX, PREMIS etc.
Communication	How description is formatted and transmitted	MARC, EAD, METS

***A repository applying metadata standards
will create effective metadata records for
the***

****discovery,***

****sharing,***

and,

****ongoing management***

of its digital objects.

Data Silos Can Happen Because:

- We lack staff & skills to implement standards
- We perceive our Users as Local Only
- We recognize that storage is cheap
- We believe we can't keep up with dynamic standards

Data SILOS are
unstable

- Data standards are stable....they are the products of thorough intellectual process and are maintained by groups of experts.
- Data standards are also dynamic – evolving in response to community needs.
- Institutions customizing standards face migration issues
- Leads to local instability as institutions must resolve problems without community solutions

ALA Tiaga Forum Provocative Statements Discussion, 2006

“Within the next five years.....”

- The continuing disaggregation of content from original containers causes a revolution in resource discovery
- There will no longer be a monolithic “library” Web site....instead, data will be pushed out to many starting places on the Web and directly to users
- All information discovery will begin at Google, including discovery of “archival” resources

Ithaka's 2006 Studies of Key Stakeholders in the Digital Transformation in Higher Education, 2008

- Since 2003, the number of scholars across disciplines who report starting their research at non-library discovery tools, has increased
- Over 90% of librarians list the gateway /portal role as very important
- There is a disconnect!

So, don't let your data be shrouded in the fog of mystery.....

Tear down SILOS!
Share your
Metadata!
Promote Discovery &
Use of your Data!

Library of Congress Working Group on the Future of Bibliographic Control, 2008

- Recommends making EAD finding aids accessible via online catalogs and internet
- Encourages inter-institutional collaboration for sharing metadata records

CLIR's Cataloging Hidden Special Collections and Archives Program, 2009

“Applicants will be expected to base their proposals on technical solutions that already exist for swift and efficient entry of data which can be translated into **standard records formats such as EAD and MARC**”

Thank You!

rochandler@ucsd.edu

Conveying Metadata Among Silos

Bradley D. Westbrook
Metadata Analysis and Specification Unit
UC San Diego Libraries

Overview

- Reframing the “silo” problem
- Challenges for metadata sharing
- Tools / methods for metadata sharing
- The problem of metadata synchronicity

Some facts about metadata silos

- Inevitable
- Ubiquitous
- Beneficial

What's good about metadata silos?

- Metadata silos share core purposes

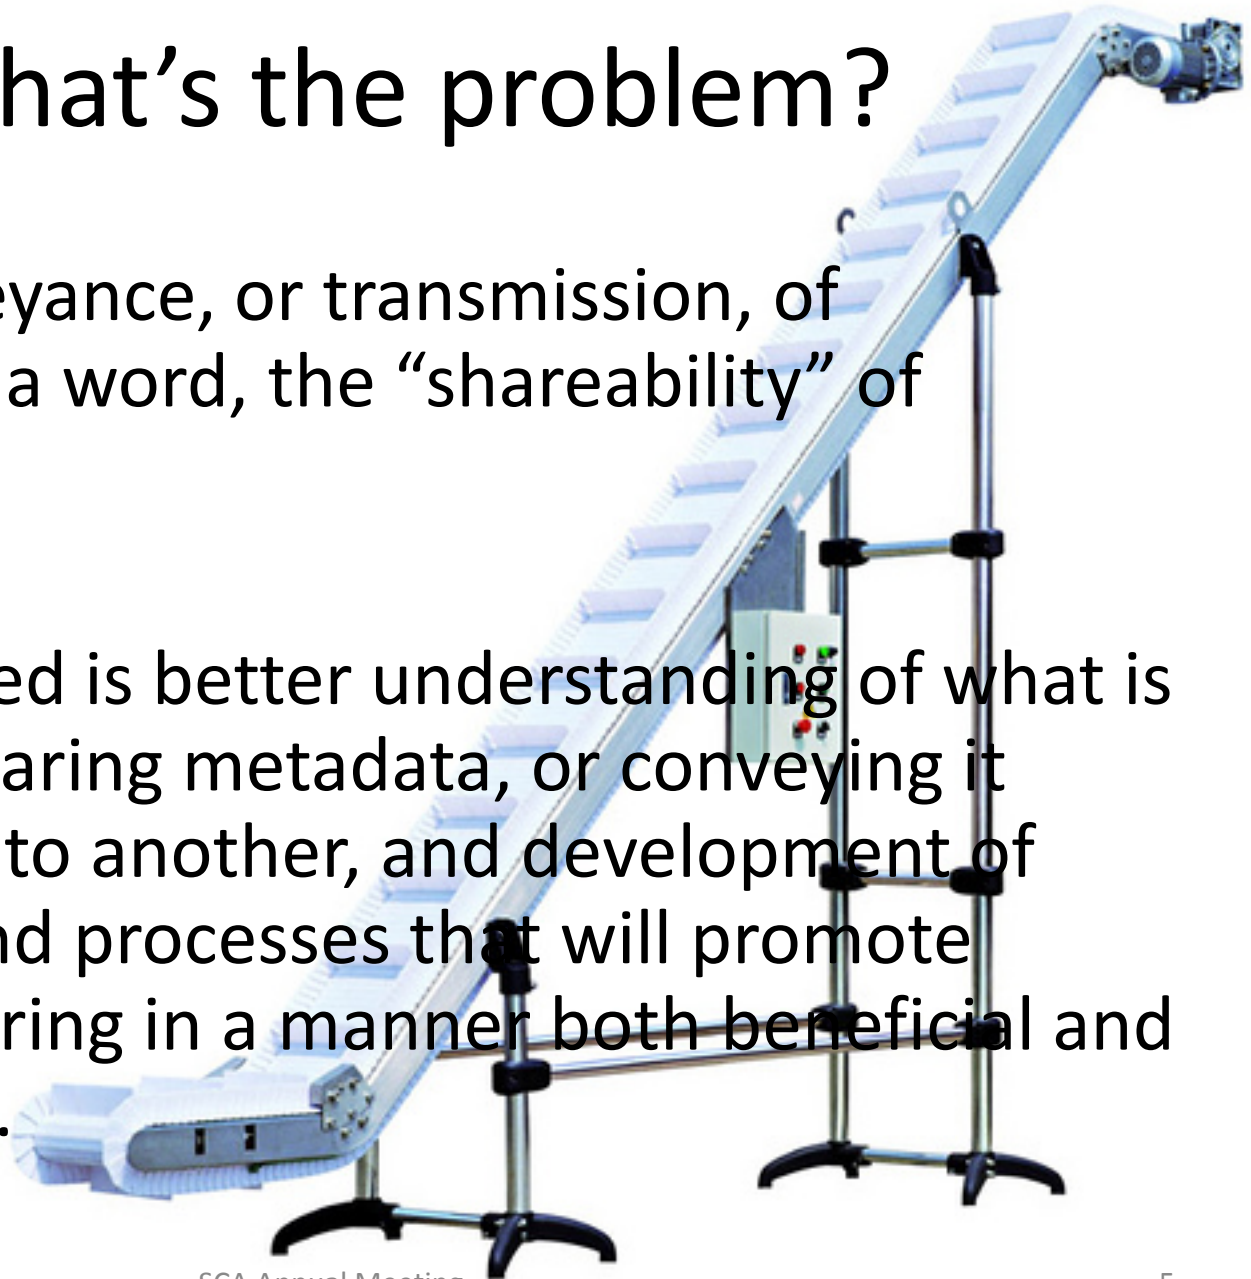

- Finding
- Identifying
- Selecting
- Acquiring

IFLA Study Group on the Functional Requirements for Bibliographic Records (1997)

So what's the problem?

It is the conveyance, or transmission, of metadata. In a word, the “shareability” of metadata.

What is needed is better understanding of what is involved in sharing metadata, or conveying it from one silo to another, and development of techniques and processes that will promote metadata sharing in a manner both beneficial and cost-effective.

What's so important about sharing?

- Efficiency
- Increased access
- New data products
- Professionalism

Challenges for metadata sharing

- Increasingly complicated data environment
- Transformation barriers

Increasingly complicated metadata environment

- Book catalogs
- AACR and card catalogs
- Multiple content standards for different kinds of objects and functions
- Multiple format standards for communicating metadata
- Intersecting but bounded knowledge consuming / producing communities

Transformation barriers

Inequalities among standards create barriers when conveying metadata from one environment to another.

Kinds of Inequalities

- Specific to general
- Differences in data format / values
- One to many (splitting)
- Many to one (aggregation)
- Structural differences
- Missing data
- Superfluous data

Specific to general

Creator

Theodore Roosevelt

His Life and Times on Film

Overview

Theodore Roosevelt was the first U.S. president to have his career and life associated as a major event by creating a unique experience for his

- Technical Metadata

to support different system functions, like preservation

Replacing missing data

- Take from collection level metadata or context
- Draw on non-explicit metadata (e.g., organizational practices, workflow documentation, cataloging guidelines)
- Extract from files (mainly for technical metadata)
- Infer from existing metadata (e.g., if a file has an mp3 extension, assign a mime type of audio/mpeg)

Superfluous local metadata

Relevant in the original context of an item but not in its new environment.

Workflow and management metadata, e.g.

- who digitized an item and other work actions
- accession and stack location information
- notes about the physical condition of a source item
- terms used to drive local access mechanisms

Tools / methods sharing metadata

- Basic software programs
 - Excel
 - XML editors
 - XSLT
 - Altova Map Force
- Collection management / metadata authoring systems
 - UC San Diego Libraries' DAMS
 - Archivists' Toolkit

Excel

- Good for visual scanning of data for patterns or disruptions of patterns
- Easy to add data
- Supports a variety of data manipulation
 - Find and Replace
 - Concatenation
 - Date formatting
 - A lot more...

Archivists' Toolkit export metadata map

XML Editors

- For working with XML encoded data
 - Can import excel spreadsheets into xml format
 - Can be used to process xml data with an xslt style sheet
 - Contextual find and replace
 - Record / model validation

23/11/2007

XSLT

Extensible Stylesheet Language Transformations

- For transformation of XML encoded data
- High technical requirement to create, modify and troubleshoot
- Can be reused & shared
- Supports more advanced data transformations

UC San Diego Libraries' DAMS

The screenshot shows the UCSD Libraries Digital Asset Management System interface. The browser window title is "UCSD Libraries Digital Asset Management System - Mozilla Firefox". The address bar shows the URL: https://libraries.ucsd.edu/kb/curator/search?ds=jdbc/dams4&scope=mscl_SpanishPosters. The page title is "UCSD Libraries Digital Asset Management System".

The interface includes a search bar with the text "Search" and a dropdown menu set to "single predicate display". Below the search bar, it indicates "Search Results: 1 through 20 of 99".

The main content area displays a grid of posters. A popup window is open over the poster titled "Al front!". The popup contains the following metadata:

- Descriptive** (selected)
- Administrative**
- Rights**
- Edit Mode**
- DDOM** (circled in red)

bb0103205v	bb5598143g mods:abstract	<p>The soldier on the poster is bathed in a revolutionary red light as the text proclaims: "To the Front!" Simple and to the point, this poster was undoubtedly a recruiting poster for CNT and FAI in the region of Cataluña in Republican Spain. Given that the CNT and FAI fell out of favor with an increasingly communist-influenced government headed by Juan Negrín and subsequently lost political power in Republican Spain with the disbanding of the Council of Aragon in September of 1937, this poster can be dated to sometime during the fifteen months of the Civil War prior to September 1937.</p> <p>The Confederación Nacional del Trabajo (CNT) was organized in 1911 and soon became the largest worker's organization in Spain. The Federación Anarquista Ibérica (FAI) was formed in Valencia in 1927 and was known as the radical, ultra-left inner core of the CNT. With its goal of creating a revolution modeled on the Russian Revolution of 1917, many members of the FAI or faistas were wary about the concessions the CNT made to the socialist government of Republican Spain. Faistas were also critical of the dilution of FAI revolutionary political goals as it and the CNT joined with other more moderate groups under the banner of antifascism. During the civil war, both the CNT-FAI fared well in the first year of the Civil War, the militia of the FAI became the Army of Aragon giving the FAI powerful influence in that region of Republican Spain. In addition, the CNT and FAI held effective control over the Antifascist Militia Committee. However, the tide began to turn for the CNT and the FAI, in particular, after a series of key losses to Nationalist troops brought criticism to the FAI militias. In addition, separatists and others members of the Antifascist Militias Committee began to combine the Army of Aragon with the regular Republican Army effectively depriving the FAI of its paramilitary identity and power base.</p> <p>Carlos Fontser was a Catalan painter born in 1916. Little is known about his life before or after the Civil War. He was a founding member of the Sindicat de Dibuxants Professionals (Syndicate of Professional Painters) established in April 1936. In 1977, he wrote a short history of the organization as an appendix to a work on Republican Posters from the Spanish Civil War entitled Carteles de la República y de la Guerra Civil. During the war, Fontser worked as an artist for the Generalitat de Cataluña, FAI (Federación Anarquista Ibérica), POUM (Partido Obrero de Unificación Marxista), CNT, PSU (Partido Socialista Unificada), UGT (Unión General de Trabajadores) and SRI (Socorro Rojo Internacional). Another example of Fontser's work in this exhibit is poster 88.</p>

Archivists' Toolkit

The screenshot displays the Archivists' Toolkit - 1.5.9 interface. The main window shows a record for 'Dick Dobbins collection on the Pacific Coast League' with the Resource Identifier MS 4031, MSP 4031. The interface includes a left-hand navigation pane with a tree view of resources, a central area with tabs for 'Basic Description', 'Names & Subjects', 'Notes Etc. & Deaccessions', and 'Finding Aid Data'. The 'Basic Description' tab is active, showing fields for Level (collection), Title (Dick Dobbins collection on the Pacific Coast League), Date Expression (Bulk, 1902-1999 1866-1999, bulk 1902-), Inclusive Dates (Begin 1866, End 1999), Bulk Dates (Begin 1902, End 1999), Language (English (eng)), and Repository Processing Note. A right-hand pane shows 'Accessions linked to this Resource ID:' and 'Extent' (Extent Number 64, Linear feet). At the bottom, there are buttons for 'Add Child', 'Add Sibling', 'Delete Component', 'Transfer', 'Manage Locations', 'Export EAD', 'Export MARC', and 'Export Cont. Labels'. The 'Export EAD' and 'Export MARC' buttons are circled in red. The status bar at the bottom indicates 'Created: May 5, 2009 by snowman | Modified: May 5, 2009 by snowman | Record Number: 4'.

It's good!

I've been walking around for months thinking that Vietnamese food was off the menu for me; I stopped eating meat. I think this place just put it right back on the menu!

I think it's really scary how close they come to mimicking meat at the same time not. You'll just have to try it to maybe understand.

While at the place, the owner was quite friendly and warm; same with other customers patronizing the place. I asked a couple of the customers if they were vegan or vegetarian, they both said no. They just mentioned that the food was good.

Another cool thing to mention is that the own mentioned that he would be willing to teach people how to cook anything he served.

Enough said, go try this place if you like Vietnamese food.

Regular Expressions, overhyped??? [closed]

I'm a member on several forums that have a subforum dedicated to programming questions.

2

It is an observation that to almost every single question about finding data in strings, the most common answer is "use regular expressions". And if you're lucky, a link to a tutorial.

For many situations that people will generally recommend regular expression, it's pure overkill.

Many things can be done with `substring()` and `split()` functions, yet people always seem to put regular expressions on a throne. Why is this?

Does this have something to do with the history of regular expressions versus these OO-language functions? Are the people who recommend regular expressions old farts?

Why in the name of the Matrix should I use a regular expression and test it, to see if a string contains a questionmark, if I can just do `string1.contains("?");`

While in some cases, such as form validation, regular expressions are usefull, I find that in most cases I don't need them.

So how often do **you** use regular expressions, not because it's usefull, but because it's what you're used to using.

EDIT: if you're gonna vote to close this, at least have the decency to make a comment as to why!

tags

Ask questions, provide answers, vote for the things you find helpful — and Stack Overflow will bestow badges upon you. Here's a list of all the badges, along with a count of how many users have earned each one so far:

Legend

● Gold Badge

Gold Badges are rare. You'll have to not only participate but be skilled and knowledgeable to earn these. They're something of an accomplishment!

● Silver Badge

Silver badges are earned for longer term goals. Silver badges are uncommon, but definitely attainable if you're interested enough.

● Bronze Badge

Bronze badges are earned for basic use of the Stack Overflow site; they are relatively easy to earn.

Motivation to Participate

● Autobiographer	× 11388	Completed all user profile fields
● Beta	× 3771	Actively participated in the Stack Overflow private beta
● Citizen Patrol	× 2591	First flagged post
● Civic Duty	× 1638	Voted 300 times
● Cleanup	× 1197	First rollback
● Commentator	× 8474	Left 10 comments
● Critic	× 10493	First down vote
● Disciplined	× 538	Deleted own post with 5 or more upvotes
● Editor	× 20795	First edit
● Enlightened	× 3203	First answer was accepted with at least 10 up votes
● Famous Question	× 43	Asked a question with 10,000 views
● Favorite Question	× 309	Question favorited by 25 users

Small Tasks @ TextEagle

Mobile Human Computation in Africa

TextEagle is a...”system enabling the 3 billion mobile phone subscribers living in the developing world to earn small amounts of money by completing short, SMS-based tasks.”

Nathan Eagle
Research Scientist, MIT

Source: <http://web.media.mit.edu/~nathan/>

Small Tasks @ TextEagle

Translation/Transcription Services

Question: Translate the phrase "Address Book" into Giriama.

Question: Transcribe the following audio clip from a New York hospital.

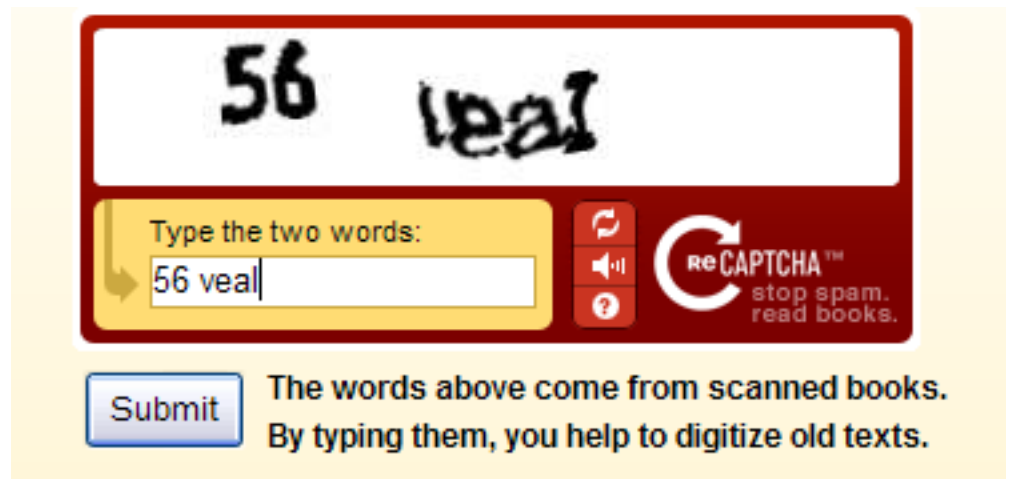

Also Citizen Journalism

Human Intelligence Tasks (tacit)

User may not be aware of how tasks are utilized.

reCAPTCHA (based on CAPTCHA)

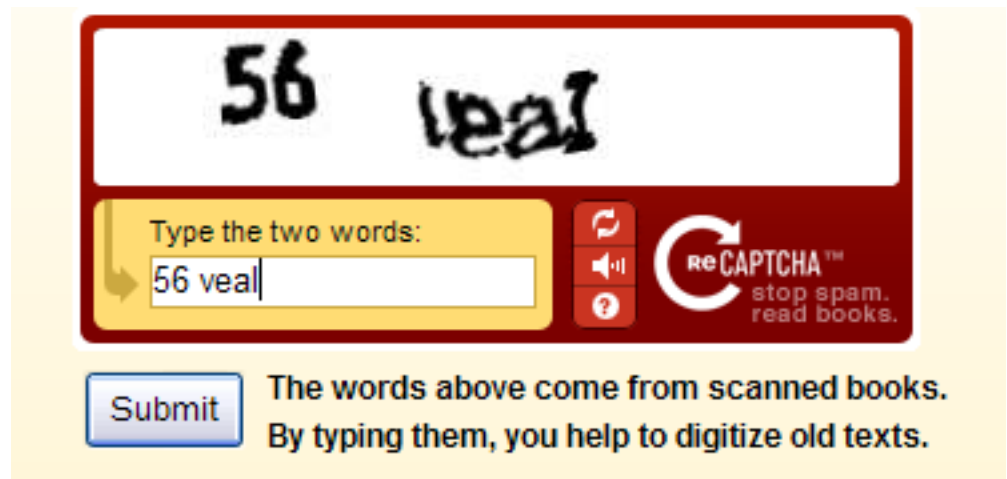

ESP Game (now Google Image Labeler)

CAPTCHA:

“Are you human?”

(CAPTCHA: Developed by Louis Von Ahn)

CAPTCHA:

(Completely Automated Public Turing Test
To Tell Computers and Humans Apart)

Security based on human perception
Turing Test administered by AI

(CAPTCHA: Developed by Louis Von Ahn)

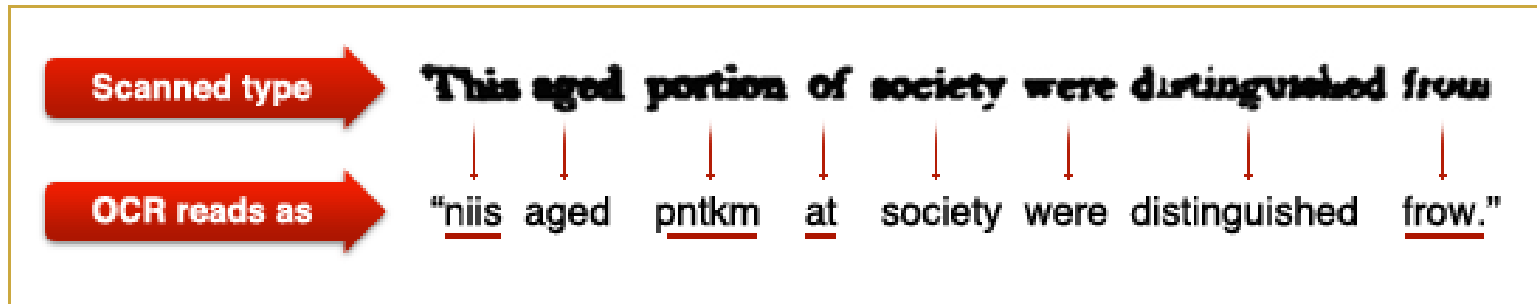

reCAPTCHA

Security + Failed OCR = Opportunity

(CAPTCHA: Developed by Louis Von Ahn)

reCAPTCHA

Currently being used to help scan books for **Internet Archive** and old editions of the **New York Times**.

(graphic - <http://recaptcha.net/learnmore.html>)

reCAPTCHA

Bots getting better at deciphering the CAPTCHAs

(graphic - <http://recaptcha.net/learnmore.html>)

reCAPTCHA

Bots getting better at deciphering the CAPTCHAs

Creates feedback loop - Good thing, since it means
OCR gets more precise at same time

ESP Game (now Google Image Labeler)

2 individuals match = high probability of reliable result

With Human Computation...

...computing becomes the coordinating force between many individuals and intelligent or perceptual tasks.

Human Computation Models

Social

Tagging (Flickr) and Comments (Amazon)

Ratings (Yelp)

Problem Solving (StackOverflow)

Economic

Mechanical Turk (Amazon) - small tasks \$0 - \$10

TextEagle (Nathan Eagle) – tasks for mobile phone

Tacit

reCAPTCHA (based on CAPTCHA)

ESP Game (now Google Image Labeler)

How can you create a platform
for capturing social knowledge?

Shared Knowledge Production

Public platforms – ex. Flickr

Develop platform – ex. Simul8 Model

UCLA Library **Simul8** Group Model

Listen to users – experience paradigm

See user mode, lifestyle, aesthetic

Engage in their mode – playful and experimental dev

Fast prototyping with high level programming

Student developers and designers
