BIBLIOGRAPHIA NUDIBRANCHIA

Third Online Edition, Annotated

compiled by
Gary McDonald
7 July 2021

This bibliography is an attempt to list all publications which mention nudibranchs, with the exception of textbooks of invertebrate zoology (I have included those textbooks which I found at the Biodiversity Heritage Library) and field guides to the general marine fauna of geographic areas. In the case of the latter, I have included those to which I have access, but have not attempted to list all field guides available. I also have not made a thorough search for theses and dissertations, but have included all those of which I am aware. Citations were compiled from Biological Abstracts, its RRM counterpart & antecedent, BIOSIS, Current Contents, Zoological Record, Russell's Index Nudibranchia (1971) & supplement (1986), & Opisthobranch Newsletter. Additional citations were gleaned from the "references cited" sections of numerous nudibranch articles. Additional citations were formerly from weekly updates from ISI Web of Knowledge, Ovid Citations, & CSA Illumina Database: Zoological Record Plus. Currently my University library subscribes to Web of Science, Web of Knowledge and BIOSIS Previews, from which I obtain weekly updates of searches for all nudibranch genera. I also searched at the Biodiversity Heritage Library (BHL) (<http://www.biodiversitylibrary.org>) for occurrences of "nudibranch, nudibranchia", etc., as well as for most of the nudibranch genera. BHL, Hathi Trust Digital Library (https://www.hathitrust.org/digital_library), and Gallica (<http://gallica.bnf.fr/?lang=EN>) are excellent sources for much of the older literature. In addition, I performed Google searches on the internet for many nudibranch genus names, which yielded many of the citations for the "grey literature", i.e. technical reports, etc. Approximately 5% of the included articles have not been seen, so some citations may be incomplete or possibly in error. Comments, corrections, or additions are always welcome & may be emailed to: mcduck@ucsc.edu.

The list of species after each citation lists the species names which are mentioned in the article, with the following exceptions: 1) if a species name was listed only as a junior synonym in a formal synonymy, it is not included, 2) if a species is mentioned only as the type species of a genus, it is not included. Generally, alternate or incorrect spellings are not listed, e.g.: *Austrodoris kerguelensis* is listed as *Austrodoris kerguelenensis*; *Hexabranchnus mormosus* is listed as *Hexabranchnus morsomus*; *Tritonia diomedea* is listed as *Tritonia diomedeia*; *Aegirus* is listed as *Aegires*; *Thethys* is listed as *Tethys*; *Onchidorus* is listed as *Onchidoris*; etc. In cases where the abbreviation cf. (confer) is used in a species name in an article, I have omitted the abbreviation from the species list (e.g. *Onchidoris cf. depressa* is listed as *Onchidoris depressa*), in order to make it easier to search for all occurrences of the name. The species were listed by quickly skimming each article, so it is possible that a few species were overlooked, especially in some of the older articles of which I have poor photocopies, or in a few of the older articles in which the scientific names are not printed in italics. In articles which mention only genera but no species, I have listed the genera. For articles which mention both a genus and species within the genus, generally I have listed only the species. For articles which mention species, by genus only, such as many of the articles on neurophysiology or learning using specimens of *Hermisenda crassicornis* and *Tritonia diomedea*, I have listed them as *Hermisenda* and *Tritonia* respectively, as they appeared in the article. For articles which list unnamed species with numbers, I have omitted the numbers (e.g. *Doris* sp. 1, *Doris* sp. 2 are listed as *Doris* sp.). For articles which mention neither species nor genera, but do mention higher taxa within the Nudibranchia, I have listed the higher taxa. In the case of some of the older literature (e.g. Fredol, 1865), where formal scientific names were not used, if it is obvious which species is being referred to, I have used the scientific name equivalent, in order to make it easier to find all the references to a particular species (e.g. *Scyllaea pelagica* for Scyllée pélagique); if it is not obvious, then I have listed the name as shown in the article (e.g. Phanerobranche doriforme). For articles which don't mention any species or genera but refer only to nudibranchs in general, I have listed "nudibranchs" or "Nudibranchia" etc., as listed in the article. For publications which listed only the initials of the author's first and/or middle names, I have added the full name when I could determine it by reference to other sources; (I originally added first and/or middle names without square brackets, but recently have included them in square brackets if the names were obtained from a source other than the publication). For articles published between 1800 and 1900, I usually consulted The Royal Society of London, Catalogue of Scientific Papers, for more recent articles I consulted online library catalogues, especially for theses or dissertations. I also consulted: Eugene V. Coan, Alan R. Kabat & Richard E. Petit, 2013. 2,400 years of malacology, 10th ed., February 7, 2013, 1088 pp. + 89 pp. [Annex 1 of Collations] + 65 pp. [Annex 2 – Küster Collation]. American Malacological Society. (http://www.malacological.org/pdfs/2400years/2400yrs_of_Malacology-part_1.pdf). The full name of an author is usually included only for the first article listed by the author, additional citations by the same author include only the initials of first and middle names.

If I am aware of an online source for a digital copy of a book or article, I have listed the URL for that item, but I have not attempted to find all of the online sources. Some of the URLs may be accessible only with subscription, because I access items via an account through my university library, which has paid access to many of

the journals online.

Nota Bene: This bibliography was created for my personal use, originally in Word Star, later exported to WordPerfect, and finally to Microsoft Word. The Word file contains my notes and comments, including an accession number for each reprint, interlibrary loan request status, etc. For publication of this bibliography on the web, I have used macros to remove my notes prior to converting to portable document format (pdf); so it is possible that some notes were not removed by the macros, especially if the note was not correctly formatted when entered. Because this bibliography now consists of over 1,650 pages & more than 19,000 citations, I have quickly perused, but not carefully proofread, every page to insure that all notes are removed. This is, of course, a “work in progress”, and as such will never be complete; and because I created this bibliography for my own use, it is offered “as is”, without any guarantee of the accuracy of each citation.

I wish to thank all those who have regularly provided reprints of their publications, and those authors who sent bibliographies of their publications. I especially thank Julia Nunn, who sent me several articles of which I was previously unaware; and also Juan Lucas Cervera who sent me several articles published in Spanish and which I had previously been unable to obtain. Sydney Gauld & Jenny Taylor very kindly provided copies of three articles published in Orkney Field Club Bulletin, which I was unable to obtain elsewhere.

I also wish thank the staff of the Interlibrary Loan Department, McHenry Library, University of California, Santa Cruz; especially Joan Hodgson, Betty Rentz, & Alice Morrow, each of whom went to great lengths to obtain some of the more obscure articles which were difficult to find.

I wish to offer a special thank you to Alainna Wrigley, Publication Management System Coordinator, California Digital Library. When I first attempted to upload this third edition to eScholarship, the upload failed. After a bit of detective work, I discovered that eScholarship had a limit of 2000 pages per article. Alainna worked with the CDL developers to remove this restriction.
