LA JOLLA, CALIFORNIA 92093

PREFACE

This is the first in a series of catalogs of holdings of the Benthic Invertebrate Collections of the Scripps Institution of Oceanography. While the collections date back to the earliest days of the Institution, they have expanded markedly during the past decade through the efforts of numerous Scripps scientists and graduate students as well as through gifts or donations from private and government sources. Use of the collections has also increased greatly, especially by scientists outside the Institution, and it has therefore been deemed appropriate to inform the scientific community at large of the holdings of the Benthic Invertebrate Collection of the Scripps Institution of Oceanography by this series of catalogs.

The present catalog, containing 3093 entries, covers the Decapod Crustacea (exclusive of the Penaeidea, Paguridae, and Porcellanidae) and the Stomatopoda. Of those excluded, the first are on loan to a specialist on the group while the second and third are not yet sufficiently sorted and identified to be included at this time. The Euphausiacea, considered decapods by some, are contained in the Planktonic Invertebrate Collections (Dr. A. Fleminger, Curator).

Each catalog will follow the format of this one. The arrangement is systematic; each entry is generally a preliminary identification and includes relevant field data. The material can be examined here, or it may be made available by loan, gift, or exchange to qualified persons or private or government agencies.

Higher systematic categories used are as in F. A. Chace and T. H. Waterman (1960, "General Crustacean Biology," pp. 1-33. In T. H. Waterman, Ed., Physiology of Crustacea, Vol. 1, Academic Press, New York. 670 p.) and (or) Robert D. Barnes (1974, Invertebrate Zoology, W. B. Saunders Company, Toronto). Families, genera, and species are treated as in the most familiar or recent references; the Caridea and Stenopodidea are arranged according to L. B. Holthuis (1955, "Recent Genera of the Caridean and Stenopodidean Shrimps," Leyden Zoologische Verhandelingen, 26: 1-157); the Anomura are as in Waldo L. Schmitt (1921, "The Marine Decapod Crustacea of California," University of California Publications in Zoology, 23: 1-470); the Brachyura (except the Portunidae and Oxyrhyncha) are as in Mary J. Rathbun (1918, "The Grapsoid Crabs of America," United States National Museum Bulletin, 97: 1-461, 1930, "The Cancroid Crabs of America," ibid., 152: 1-609, and 1937, "The Oxystomatous and Allied Crabs of America," ibid., 166: 1-278); the Portunidae are as in John S. Garth and W. Stephenson (1966, "Brachyura of the Pacific Coast of America Brachyrhyncha: Portunidae," Allan Hancock Monographs in Marine Biology, 1: 1-154). The Oxyrhyncha follow John S. Garth (1958, "Brachyura of the Pacific Coast of America Oxyrhyncha," Allan Hancock Pacific Expeditions, 21: 1-854); and the Stomatopoda are as in Raymond B. Manning (1971, "Eastern Pacific Expeditions of the New York Zoological Society. Stomatopod Crustacea," Zoologica, 56: 95-113).

The catalog was prepared under the direction and encouragement of Dr. William A. Newman (Curator) for which I am most thankful.

Spencer R. Luke
Museum Scientist
