A Compilation of Selected Thermodynamic and Transport
Properties of Binary Electrolytes in Aqueous Solution

Thomas W. Chapman and John Newman

Inorganic Materials Research Division
Lawrence Radiation Laboratory, and
Department of Chemical Engineering
University of California, Berkeley

May, 1968

Abstract

Data from the literature on properties of binary electrolytes in aqueous solutions are tabulated. The properties include the density, the viscosity, the conductivity, the transference number, the diffusion coefficient, and the activity coefficient.

Introduction

In connection with a survey of the transport properties of electrolytic solutions,¹ data on the density, viscosity, transference number, conductivity, diffusion coefficient, and activity coefficient were compiled from the literature. Most of the data were located with the help of the Chemical Abstracts indices and were taken from the original sources. The search for transference number data was facilitated by a recent review on the measurement of these properties by Kaimakov and Varshavskaya.² Many conductance and transference number measurements are summarized in Landolt-Börnstein.³ Older density, viscosity, and conductance data are available in the International Critical Tables⁴ and Timmermans' compilations.⁵ To a large extent, activity coefficient data were taken from the Appendix of Robinson and Stokes,⁶ for concentrations above 0.1 M. These already represent a smoothing and recalculation of many sets of data.

Form of the Data

Concentrations are expressed in the following forms:

1. Concentration c (moles per liter).
2. Molality m (moles per kg of solvent).
3. Grams of anhydrous solute per one hundred grams of solvent.
4. Mass fraction of anhydrous solute.
5. Normality (equivalents per liter).
6. Moles per kg of solution.

Densities are given as:

1. Density (grams per cubic centimeter).
2. Relative density (the density of the solution divided by the density

of the solvent at the same temperature).

Viscosities are given in the forms:

1. Viscosity (centipoise).
2. Relative viscosity (viscosity of the solution divided by the viscosity of the solvent at the same temperature).

Conductivities are given in the forms:

1. Conductivity (mho/cm).
2. Molar conductance ($\text{mho-cm}^2/\text{mole}$).
3. Equivalent conductance ($\text{mho-cm}^2/\text{equivalent}$).

Activity coefficients are given in the forms:

1. The activity coefficient γ on a molal basis (kg/mole).
2. The common logarithm of γ .
3. The natural logarithm of γ .
4. $1 + d \ln \gamma / d \ln m$.
5. $1 + d \ln \gamma / d \ln c$, where γ is the activity coefficient on a concentration basis (liter/mole).

Diffusion coefficients are in cm^2/sec . The transference numbers (dimensionless) are for the cation.

Phosphoric Acid

The isopiestic data of Elmore, Mason and Christensen⁷ were converted to the form $1 + d \ln \gamma / d \ln m$ by the method outlined on p.146 of reference 1. It should be noted that phosphoric acid is treated as a 1-1 electrolyte.

Order of Tables

The data are given in alphabetical order by the chemical formula of the solute and for each solute in order of increasing temperature. The properties are in the order of density, viscosity, conductivity, conductance, transference number, and activity coefficient. At the end of the tables of data the references are collected again, filed alphabetically by the first author and, for each first author, in order of date of publication.

This report was prepared as an account of Government sponsored work. Neither the United States, nor the Commission, nor any person acting on behalf of the Commission:

- A. Makes any warranty or representation, expressed or implied, with respect to the accuracy, completeness, or usefulness of the information contained in this report, or that the use of any information, apparatus, method, or process disclosed in this report may not infringe privately owned rights; or
- B. Assumes any liabilities with respect to the use of, or for damages resulting from the use of any information, apparatus, method, or process disclosed in this report.

As used in the above, "person acting on behalf of the Commission" includes any employee or contractor of the Commission, or employee of such contractor, to the extent that such employee or contractor of the Commission, or employee of such contractor prepares, disseminates, or provides access to, any information pursuant to his employment or contract with the Commission, or his employment with such contractor.
