## ACKNOWLEDGEMENTS

My thanks to Dean Joseph Cerny of the Berkeley Graduate Division and former Vice-President Eugene Cota-Robles, Office of the President, Academic Affairs for their interest as much as their financial support. I would also like to thank Maresi Nerad and Judy Sui of the Graduate Division for their invaluable suggestions and general assistance, as well as Maria Toyofuku and Carol Lim who assisted me in running the project. My heartfelt thanks too are given to all the graduate assistants in the various departments who helped me collect the data as well as to those faculty who provided information to me directly.

## LIST OF TABLES

### Introductory Tables:

#### Response to Survey:

1. Number of Ph.D. Recipients by Department
2. Number of Ph.D. Recipients by NRC Area

#### Demographics:

3. Characteristics of Survey Population
4. Ethnic Distribution by NRC Area
- 4A. Ethnic Distribution by NRC Area Ranked by Percentage of Minority Ph.D.s in Each

#### Overview of Placement:

5. Total Occupational Placement by Sector and NRC Area

#### Academic Placement:

6. Academic Employment by Institution Rank and Gender
7. Academic Employment by Institution Rank and Ethnicity
8. Academic Employment in California by Institution Rank
9. Employment at the University of California: First and Last Position
10. UC Berkeley Employment by Year and Position - Position One
11. Post Doctoral Appointments by Year and NRC Area
12. Post Doctoral Appointments by Sector and NRC Area
13. Summary of Academic Placement by Gender and Ethnicity
- 13A-H. Academic Placement by Institution Rank, NRC Area, Gender and Ethnicity
  - 13A. Education
  - 13B. Engineering
  - 13C. Humanities
  - 13D. Life Sciences
  - 13E. Physical Sciences
  - 13F. Professional
  - 13G. Social Sciences
  - 13H. Interdepartmental
14. Academic Employment in U.S. by Institution Rank, Public and Private
15. Academic Employment in U.S. by State, Public & Private Institution Including Leading Academic Employers (RU 1 & 2) by State & Institution
16. Employment by Job Title at all University Employers: First Position, U.S. and Abroad (Includes sectors Academe, and parts of sectors Research, Medical Research, Higher Education, and Professional Practice)

Total Employment:

17. Summary of Total Employment by Sector
- 17A-H.Total Employment in each NRC Area by Sector, Gender and Ethnicity
  - 17A. Education
  - 17B. Engineering
  - 17C. Humanities
  - 17D. Life Sciences
  - 17E. Physical Sciences
  - 17F. Professional
  - 17G. Social Sciences
  - 17H. Interdepartmental

Geographical Distribution of Employment:

18. Summary of Geographical Distribution by Sector
- 18A-H.Geographical Distribution by each NRC Area and Sector
  - 18A. Education
  - 18B. Engineering
  - 18C. Humanities
  - 18D. Life Sciences
  - 18E. Physical Sciences
  - 18F. Professional
  - 18G. Social Sciences
  - 18H. Interdepartmental
19. Geographic Distribution of Industrial/Business Employers in California and the U.S. by Position Type and NRC Area
20. Business/Private Employment in the Five Bay Area Counties with Fields hired
- 20A. Business/Private Employment in the City of Berkeley with Fields hired
21. Business/Private Employment in California
22. Geographic Distribution of Government Employment in California and U.S. by Position Type and NRC Area
23. Major Government Employers with numbers in California and U.S. by State

Foreign Student Employment:

24. Total Foreign Student Employment by Year of Graduation and Location
25. Total Foreign Student Employment by Sector and Location
- 26A-H.Foreign Student Employment for each NRC Area by Sector and Location
  - 26A. Education
  - 26B. Engineering
  - 26BB.Engineering by Year of Graduation and Location
  - 26C. Humanities
  - 26D. Life Sciences
  - 26E. Physical Sciences
  - 26F. Professional

26G. Social Sciences  
26H. Interdepartmental

v.

27. Summary of Foreign Student Employment by NRC Area and Location
28. Academic Employment of Foreign Student Comparatively by NRC Area as % of all in Academic Employment and as % of total in Academic Employment in U.S.

Employment by Gender:

29. Distribution of Employment by Sector, Gender and NRC Area
30. Distribution of Academic Employment by Gender, Institution Rank, Public and Private
31. Total Employment of Men & Women by Sector and Location

Employment by Ethnicity:

- 32A-F. Employment of Ethnic Groups by NRC and Sector
  - 32A. Asian
  - 32B. African American
  - 32C. Chicano
  - 32D. Hispanic
  - 32E. Native American
  - 32F. Other
33. Regional Distribution of Academic Employment by Ethnicity
34. Academic Employment by State: List of Institutions, Departments, Ethnicity
  - Part I: Academic Employment in California by Ethnicity
  - Part II: Ethnic Distribution of Academic Employment by State
- 35.-40. Vacant

Placement by Department:

- 41.- 128. Alphabetical Tables of Each Berkeley Department (Prior to Reorganization of the Life Sciences) showing:
  - A. Occupational Placement by Sector, Gender and Location
  - B. Academic Placement by Institutional Rank, Gender and Ethnicity

**HIGHLIGHTS OF BERKELEY PLACEMENT PROJECT**  
**Report I, Placement of all Berkeley Ph.D.s 1980-1989**

Out of a total population of 6,377 Ph.D.s granted by Berkeley between December 1980 and June 1989, first positions are documented for 4,853 or 76% of the total.

**Placement:**

\* Academia is the largest employer of Berkeley Ph.D.s at 56.2%, followed by Industry at 22.1% and Government at 7.7%. Humanities among the NRC areas placed the most in Academia at 87.9%, Engineering the least at 32.3%, however, Engineering had the highest placement in Industry at 55.4%.

\* Distribution of placement among sectors varies substantially by NRC area and ethnic group. More Asians went into industry than Whites in Engineering, Life Science and Physical Science, as did more non-Asian minorities in Engineering.

\* Within Academia 53.8% placed at the 70 RU I institutions. Placement patterns between men and women varied somewhat, more women placing at Comprehensives and Liberal Arts Colleges than men, but men and women differ less than among ethnic groups. Non-white Ph.D.s place substantially more Ph.D.s at Comprehensives and less at RU Is than Whites. Women, regardless of ethnicity place better than men in the NRC areas where they are scarcest.

\* Whites in all NRC areas (except Life Science where a few Asians did much better) placed the highest percent as well as the greatest numbers at RU I institutions at 58.5%

\* International Students, however, if employment abroad is deducted, place better than any other group in the U.S.: not less than 63.6% (Social Science) and going up to 83.4% (Life Science, Education) at Research I Universities.

**Location of Placement:**

\* Total placement in all sectors; 37.5% in California, 50% in the rest of the U.S. and 11.8% abroad. Location varies substantially by sector and NRC area with 69.3% of all Education Ph.D.s remaining in California, only 29% from Physical Science. 43.6% of all industrial employment is within the state, largely Engineering (46.3%) and Life Science (63%) Ph.D.s.

\* Location of employment also fluctuates by ethnic group with 51.9% Chicano Ph.D.s remaining in California vs. 31% Hispanics and 34% African Americans.

\* Foreign student placement for all sectors is 57.2% in the United States, 24% in California, 38.6% abroad. 38% of all employed in Industry remain in California.

\* Foreign Engineering students in all sectors place 62.6% of the total in the United States, 28.5% in California, 34.1% in the rest of the U.S., 32.1% abroad.

\* California employs 824 Berkeley Ph.D.s in Academia, 30.2% of all academic employment, 75% at public institutions. Massachusetts is the next largest state of employment in Academia with 189 Berkeley Ph.D.s. Harvard employs 57, MIT 62.

\* UC gives first positions to 590 Berkeley Ph.D.s, 234 in teaching positions. Of this number Berkeley hired 293 of its own Ph.D.s (50%), the largest category being teaching, 100 or 34% followed by post-doctoral appointments, 79 or 27%.

## Berkeley Placement Project Report

### Summary of Findings

#### Introduction:

This report deals with the total placement of the 6,377 Berkeley Ph.D.s granted between December 1980 and June 1989 from all Ph.D. granting departments. After four years of data collection employment information was located for 4,853 Ph.D.s or 76% of the total. Information came from departmental lists, graduate assistants, faculty, alumni records, and Career Planning and Placement files. While it was possible to obtain information about career paths for many in the survey, all tables, unless otherwise stated, report on first positions.

The accuracy of the data is as great as the reliability of the informants. In cases where the data was supplied by graduate assistants, it can be presumed to be accurate as they went to considerable lengths to verify their records with faculty and the students themselves. In cases where the data was supplied by thesis advisors, the quality of the returned data was uneven. While the great majority did their best to supply the full

requested information on their students, others provided only partial data and it was not always clear whether the first position was being described or a subsequent position. It was used, however, as it undoubtedly indicates the correct sector of employment. Any data element which was provided was used. The result, however, is that numbers are inconsistent in that the position title may be known, but not the location or starting date. When it was possible to check against Career Planning and Placement records, this was done. Another result is that in the Physical Sciences and Life Sciences where a post-doctoral position is *de rigueur* for a later position, the percentages of Ph.D.s who are recorded as holding such position seem low. Lastly it should be remembered that this report is on 76% of the population only. Interestingly this figure is approximately the same as the rate recorded by the National Research Council of known plans for post-doctorate plans is its Annual Survey of Earned Doctorates.

The tables have been created to give many perspectives on placement with an emphasis on placement by NRC area, gender and ethnicity. They cover all sectors of employment (see appendix A for definition of sectors), but focusses on academic placement. Another emphasis is on geographical location of employment with a detailed examination of employment in California and at the University of California. The placement of women and international students are given special attention. Finally, tables 41 through 128 examine for each department placement for all sectors by gender and location, for academic employment by institution type, gender and ethnicity.

#### Introductory Tables 1-5:

Tables 1 and 2 document the response rate of all Berkeley departments to data requests for this survey. T. 1 lists all departments alphabetically, the number of Ph.D.s granted in each between 1980-89, the completeness and quality of the data as well as the sources of data and the number of requests made before receiving it. T. 2 is similar to T. 1, however departments are listed by NRC Area. They indicate a range of completeness from 33% to 100%, fluctuations in data quality and the amount of effort necessary to obtain the data. Low completion rates should not necessarily be construed as a lack of departmental cooperation.

T. 3 and 4 reviews the basic characteristics of the survey population by gender, ethnicity and NRC Area. T. 4A rearranges the data on T. 4 by order of magnitude. When NRC areas are ranked in terms of the number of minority students the rank order is Education first with 18.3% followed by Social Science (16%), Engineering (13.4%), Life Science (11.4%), Physical Science (10.6%), Professions (10.4%) and Humanities last at 8.9%. However, if Asians are deducted from the total minority count, the ranking changes substantially: Education remains first at 14.6%, then followed by Social Science (11.2%), Life Science (6.7%), Humanities (6.6%), Professions (6.0%), Physical Science (5.5%) and last of all Engineering at 3.5%.

T. 5 provides a comprehensive overview of total placement by sector and NRC Area. The greatest number employed in academia is in the Humanities (87.9%) followed by Social Sciences and the Professions each at 71+%. The least number employed in academia is in Education (30.3%) and Engineering (32.3%), although for Education there is no one sector as large; K-12 being the next largest at 18.3%, followed by Higher

Education at 15.1%. Engineering unambiguously sends 55.4% of its graduates to Industry. The average for academic employment for all NRC areas is 56.2%, the average for industrial employment 22.1%.

Academic Employment, Tables 6-16:

T. 6 examines academic placement by gender. Research I universities are the largest employer of Berkeley Ph.D.s, employing 53.8% of all those with academic positions. There is not much difference between men and women in obtaining RU I positions, men 54.7%, women 51.9%. Patterns vary slightly thereafter: 13.8% of women go to Comprehensive U I versus 7.8% men, similarly more women go to good Liberal Arts colleges, 6.5% vs 3.7% men. A higher proportion of men go to foreign universities, 16.4% versus 9.9% women.

T. 7 presents academic placement by ethnicity. The highest percentage of employment at RU I s is of Whites at 58.5%, nearly 5 percentage points above the average. Whites are also 65.3% of the total survey population (T.3), with 1,854 employed in academia. The largest American non-White population employed in academia is Asian with 111, the smallest, Native American with 7. Among these groups is substantial variation in employment at different ranks. The highest percentage at RU I s for domestic students is, after Whites, Asians at 53.2%, the lowest, African Americans at 39.6%. Excluding Hispanics whose pattern is unique, placing 48.3% (14 people) at RU Is, 17.2% abroad, and 10% at Comprehensives (as Whites do); the pattern for the remaining minority groups (Afr.Amer, Chicano, Nat.Amer.) is to place between 37% (10

people) and 42.9% (3 people) at RU Is and between 25.9% (7 people) and 30.2% (16 people) at Comprehensive Is. In contrast, if foreign academic placement is deducted from the total of international student placement, international students place the highest percentage at RU I institutions, 74% (228 people).

T. 8 presents academic employment in California. 824 people are employed in the State, 30.2% of all academic employment and 17% of all for whom placement data exists. 66.9% are employed at RU Is, 19.1% at Comprehensives, primarily CSU institutions.

T. 9 Employment at UC. All campuses employed 595 people in academic, research and administrative positions. Research and Post-doc positions number 265 (45%), teaching positions 234 (40%). Last positions (including only positions) show an expected shift from post-docs at 89 vs 171 for first position, but only slightly more teaching positions, 255 (50%) vs. 234 (40%) for first positions. Other categories do not change much.

T. 10 UC Berkeley Employment. Showing very small numbers in each category every six month graduation date, Berkeley nonetheless gave employment to 293 of its own graduates: 79 (27%) postdocs, 100 (34%) teaching, 65 (22%) research and 49 other positions including 23 (7.8%) administrative. The large majority of these positions are short term, rather than regular career employment. Post-docs usually do not last beyond two or three years, and some are just a term in length, essentially filling a void until the student moves to another position starting in the Fall. The teaching positions while representing the largest number are temporary and often part-time in character, only 37

of the 100 are ladder positions, although a few lecturers have stayed for many years.

T. 11 Post Doctoral Appointments by NRC Area, showing the number of post docs in all sectors every six month graduation date. Not surprisingly, Physical Science and Life Sciences had the most, 290 (40.4% of all post-docs) for the former, 277 (38.6%) for the latter (of all post docs recorded). There is no consistent pattern of increased numbers since 1980, although they increase in the science and engineering fields erratically. In this category, under reporting of the number of post-doctoral appointments is suspected.

T. 12 shows in which sectors post docs were found. Except for the Humanities where there are no other possibilities than in academia, appointments were fairly widely distributed among academia, industry and government for Engineering, Life Science and Physical Science.

Table 13 shows total academic placement by gender and ethnicity. The patterns between men and women differs somewhat with a slightly higher percentage of men going to RU Is 54.7% vs 51.9% for women. However, more women place at Comprehensives (13.8% vs 7.8% for men), and at Liberal Arts Colleges (6.5% vs 3.7% men). Fewer women go abroad to teach than men (9.9% vs 16.4%). The greater difference is between ethnic groups where nearly 10% more Whites than non-Asian minorities place at RU Is, while the later places almost 10% more at Comprehensives.

Tables 13a to 13h shows a general overview of academic employment by institution rank for each NRC area and provides the basic data on each by which the placement data can be evaluated. Education (T. 13a) has the lowest percentage placed at RU I s at 34.2%. Excluding the 26 Interdepartmental Ph.D.s, the lowest of all other areas is Social

Science at 47.1% at RU I s, followed by Humanities at 48.6% The highest is the Life Sciences at 62.1%, followed by Physical Sciences (59.3%), Engineering (56.3%), and the Professions (53.6%). The average of all areas is 53.8% at RU I s (T. 6).

The distribution pattern among institution ranks also varies greatly. Education has its own pattern, placing 31.6% at Comprehensive I s. Humanities and Social Sciences are very similar, placing 12.7% and 12% respectively at Comprehensive I s. The lowest number at such institutions comes from Engineering, (4.4%) followed by Physical Science (5.8%) and Life Science (6.2%). The Professions fall between with 15.3% placed at Comprehensive I s. Although there are minor variations in distribution among other ranks, Humanities stands alone in placing 11.5% at Liberal Arts I colleges.

Placement at foreign universities also fluctuates substantially. The greatest number is in Engineering where 26.5% are employed abroad. Physical Science follows at 18.6%, the Professions at 16.8%. Life Science and Social Science are exactly the same at 12.4% placed abroad, then Education 10.5% and last, the Humanities at 6.1%. Foreign placements include both American and International graduates.

In consequence of the fairly large proportion of international students who find academic positions abroad, their placement rates at RU Is lags behind their American counterparts in all NRC areas. The range is 33% in the Social Science to 46% in the Humanities. However, if foreign employment is excluded, their placement rates at RU Is is far above any other group: 83% (5 people) in Education and Life Science (20 people) to between 72% and 74.7% for Engineering (68 people), Humanities (30) and Physical Science (59). Professional Schools foreign student placement rate falls in the middle

with 79.3% at RU I s (23 people).

The placement of women vs men exhibit quite different patterns by NRC area and relative scarcity. The greatest difference is in Engineering where 67.7% of women (all 21 of them) placed at RU I s, vs 55.1% for men who numbered 172. Life Science had the next largest gap, with much greater parity in numbers. 65% of all women Ph.D.s (117) were placed at RU I s vs 60.3% (185) men. The gap narrows in the Physical Sciences and the Professions with 61.5% (48) women vs 58.9% (287) men in PS placed at RU I s, 54.4% (49) women vs 52.8% (56) men in the Professions. The pattern is reversed in the Social Sciences where more men than women find positions at RU I s: 50.2% (145) men vs 41.8% (71) women. Instead, a greater percentage of women go to Comprehensive I s, 17.1% (29) vs 9% (26) men. An even higher percentage of women in the professions also go to Comp I s, 18.9% (17) vs men 12.3% (13), but not at the cost of RU I placement which is close to the UCB average for both men and women. Except for the Humanities where placement at Comp I s is fairly high and approximately the same for men and women (12.6% (40) men, 12.9% (35) women), placement at Comprehensives for science and engineering is not that significant, ranging between 4.4% for Engineering to 6.2% in the Life Sciences, with the difference between men and women not greater than 2.3%

Keeping in mind the percentages of minority Ph.D.s given in Table 4, the comparison of placement rates by ethnicity (Asian, White, Non-Asian Minority) in the NRC areas also reveals strikingly different patterns. Leaving Education aside, in the two departments with the largest number of non-Asian minorities as well as a sizable group

of Asians, Social Science and Life Science, Whites in their much greater numbers also place a greater percentage at RU I universities. (Social Science has a total of 16% minority Ph.D.s, Life Sciences 11.4%). In Social Science 50.8% (163) Whites placed at RU Is, compared to 47.2% (25) for non-Asian minorities, and 31.8% (7) for Asians. while the placement rate at Comprehensive Is is 10.9% (35) for Whites, 18.2% (4) for Asians, 24.5% (13) for non-Asian minorities. In Life Science 66.9% (249) Whites placed at RU Is, topped by 82.6% (19) for Asians, compared with only 38.2% (13) non-Asian minorities. As in the Social Sciences, the largest category of placement following RU Is for non-Asian minorities is at Comprehensive Is at 17.6% (6). No Asians in Life Science, however, went to Comprehensive Universities, and only 6.2% (23) Whites. In the Physical Sciences where the relative proportion of non-Asian minorities declines, their placement rate at RU Is is much higher; 62.2% (23) vs 65.8% (239) for Whites and 58.3% (14) for Asians. In this NRC area 20.8% (5) Asians placed at Comprehensive Is, while only 8.1% (3) non-Asian minorities, and 5% (18) Whites did. In the Humanities, following in its declining proportion of minorities, the placement rates at RU Is is generally lower with non-Asian minority placement at 47.1% (16) not far behind Whites at 49.3% (234), with Asian placement trailing at 40% (6). The percentages of all groups placing at Comp Is is quite similar; 13.9% (66) White, 13.3% (2) Asian, 14.7% (5) non-Asian minority. Placement at Liberal Arts Colleges is equally important in the Humanities where non-Asian minorities placed 17.6% (6) vs 12.4% (59) Whites. The key fact in all ethnic placement is that with the exception of the anomaly of Asian placement in the Life Sciences, Whites place a greater percentage as well as obviously far greater

numbers at more prestigious universities.

Table 14 shows the distribution of academic employment by rank and whether public or private. Of all academic employment 62.3% of Berkeley Ph.D.s found positions at public universities, 37.7% in private universities.

Table 15 details academic employment by state, whether public or private, including the numbers placed at RU I s and 2 s in each state. California had the largest number of placements with 824 (see table 8), followed by Massachusetts with 189 at all ranks, 140 at RUs. Harvard employs 57 UCB Ph.D.s, MIT 52. The next largest employing state is New York with 164 at all ranks; 103 at RUs. NYU (23), Cornell (57), Columbia (27) are the largest employers. After New York comes Illinois with 101 UCB Ph.D.s, 32 at the University of Chicago, 27 at U of Illinois, Urbana. Pennsylvania (80) and Texas (78) follow with 20 at the University of Penn. and 39 at UT Austin.

Table 16 shows the distribution of employment of all categories of positions held at universities for the first position. All told, universities provided employment for 2,915 people, 60% of the total with data. 289 were employed in non-academic job titles, although their activities in research and general administration are likely to reflect their area of training. The largest single category is of Assistant Professor at 1,382 (47% of university placement, followed by post-doctoral positions at 581 (20%).

Employment by Sector, Tables 17, 17A-17H:

These tables show employment in all sectors by gender and ethnic categories for each NRC area. T. 17 summarizes T. 17a-h. Women more than men go into academia (63% vs 53.4%) while men place substantially more in Industry (26.8% vs 10.3 women).

Distribution varies no more than two percentage points in other sectors between men and women, and no other sector beyond government is all that significant as an employer. There is a much greater difference among ethnic groups with significantly fewer Asians placing in academia (40.4% vs between 56.8% and 57.9%) and many more placing in Industry at 45.5%. Foreign students also place at 28.7% more in Industry than either Whites at 18.9% or non-Asian minorities at 15.5%.

Tables 17a-h. Each NRC area exhibits a substantially different pattern of distribution among sectors and among ethnic group placement, but less striking differences between men and women. The two NRC areas which placed less than 50% of its Ph.D.s in academe, Education and Engineering (excluding Interdepartmental from consideration at the moment), have similar rates of 30.3% and 32.3% in academe. All similarity ends here. Engineering has the highest placement rate in industry of any NRC area at 55.4% while the only other employer of significance is Government at 8.9%. Education has very few people employed in industry (5.6%). The most significant area after academe is K-12 Education at 18.3% followed by Higher Education at 15.1% and Professional at 10%. Fully ten people are in untrained employment.

In the Humanities where 87.9% of the total find academic positions, ranging from 79.1% for non-Asian Minorities to 92.9% for foreign students, no other sector is a significant employer with the possible exception of research where 19 people (2.8%) found positions. Social Science is most similar to the Humanities by placing 71.5% overall in academic positions. The spread of employment among sectors for the remaining 28.5% is much greater, however, with the next largest sectors being

Government 7.5%, Industry 5.5%, and Medical 4.5%. The Professions likewise have a similar spread with 71.3% going to academia, followed by Industry 7.6%, Government 5.1%, and the Professions 3.6%.

Life Science and Physical Science have a more closely related pattern of academic placement than to any other NRC area, placing 57.6% and 52.1% respectively in academe, their spread among other sectors differs substantially. Employment in the Life Sciences is distributed broadly over Medical 11.2%, Government 10.6%, and Industry 9.6%, while a total of 16 people 1.9% are pursuing another degree - most commonly a M.D. Far more people in Physical Science go to Industry at 29.2%, followed by Government at 9.9%.

It has been observed that in the aggregate there are not great differences in the placement distribution rates of men and women. Among NRC areas, though, is quite a bit of variation. Education, as usual, has its own pattern in which slightly more women than men go into academic employment (31.3% vs 28.7%). Men, however, are distributed among Professional, Higher Education and K-12 Education more or less evenly at between 14 to 16.8%, women are found more in K-12 Education at 20% followed by Higher Education. The pattern of more women in academe is followed in Engineering where 40.8% women are employed vs 31.6% men. Far more men are in Industry at 56.3% than women at 43.4%, the only other significant employer being Government for both. Differences between the placement of men and women are negligible in the Humanities, Life Science, and Physical Science. In Social Science, however, less women go into Academe (65.9% vs 75.3%), and more into Research and

the Medical sector. In the Professions more women than men go into academic employment (73.8% vs 69.3%) while more men go into Industry at 11.1% vs 3.3%.

Far more dramatic are the differences among the placement of ethnic groups. The most obvious difference is that with the exception of the Humanities and the Professions, Asians overwhelmingly are employed in Industry. 80.7% from Engineering (92 people), 42.9% from Physical Science (24 people), and 11.1% in the Life Sciences (4 people). Other NRC areas record percentages similar to Life Science, but involve only 1 to 3 individuals.

Non-Asian Minorities in Engineering also place a high percentage in Industry at 60.5% (26 people) as do those in Physical Science at 25.4%. Otherwise there is not much of a pattern except that more are placed in Academe in Education (32.4%), Physical Science (55.2%), and substantially more in the Professions at 83.3% vs 69% for Whites and 73.4% for foreign students. In other NRC areas they place less than the average for all groups, including Engineering, the Humanities and marginally less in Social Science.

Foreign students generally place more in Academe in Education (52.6% vs 30.3% average), Engineering (37.7% vs 32.3% average), Humanities (92.9% vs 87.9% average), Physical Science (75% vs 52.1% average), and Social Science (81.8% vs 71.5%). In the Professions while their placement in Academe is higher than the average (73.4% vs 71.3%), they are topped by non-Asian Minorities at 83.3%. Similarly in the Life Sciences, foreign student placement in Academe is still higher than the average (62.2% vs 57.6%), but here they are topped by Asians in Academe at 63.9%. It should be kept

in mind, however, that these tables include employment anywhere in the world, so that the true figures for academic employment in the US for foreign students would be smaller.

Geographic Distribution of Employment, Tables 18-23

Table 18 summarizes the results of tables 18a through 18h with the percentages of total placement by sector and location using California, the rest of the United States, and Abroad as measures. For all sectors, 37.5% of all Ph.D.s found employment in California, 50% in the rest of the United States and 11.8% found employment abroad. The sectors most employed in California are K-12 and Higher Education at 87.7% and 80.9% respectively. The sector with the least percentage employed in California, but the largest number of people, is Academe at 30.2%, although given that the majority of the 3,500 odd college and universities in the United States are found outside of California, this figure should be considered high. Indeed the highest percentage of any sector employed in the rest of the country is Academe at 55.4%. 14.4% found academic employment abroad, a figure which includes both domestic and international graduates. The next largest sector after Academe, Industry, also is placed heavily within the state at 43.6% vs 49% in the rest of the United States. A relatively small percentage found industrial employment abroad at 7.4%. Government is also well represented in the State at 38.3% vs 48.8 for the rest of the United States and 12.9% abroad.

Tables 18a-h present geographic distribution by sector under each NRC area. Education as usual has its own idiosyncratic pattern given the concerns of its field and the state specific credentials it generates. So 69.2% of all its graduates remain in the

State, only 13.9% go elsewhere in the United States, and a few Abroad at 6%.

Interestingly, although Education places the least percentage in academic employment at 34.2%, the largest percentage of its academically employed graduates remain in the State also at 63.2%. Overall, the percentage of those employed in Academe in California, excluding Education, varies from 22.7% for Engineering to 35.3% for Life Sciences.

Industry, the largest employer of Engineers, generally also employs a large number (272) in California as well as a high percentage (46.3%). The relatively less numerous employed in Industry in California from Life Science (51) is still a high percentage at 63%, while Physical Science employs more people in the State at 93, which is only 29.3% of those in this NRC area who go into Industry.

The most significant finding is that excepting Education and the Interdepartmental area where a very high percentage is employed in the State, all the other NRC areas also have a high percentage ranging from 29% to 42.4% employed in California. Engineering places 38.3% in the State, 78% in the United States. Physical Science employs 29% in California, 83% in the United States. This is likewise true for the Professions of which 39.6% are employed in California, 81.5% in the U.S. All three of these areas have a high percentage of foreign students (45%, 651 people for Engineering, 18.8%, 256 people for Physical Science, 32%, 111 for the Professions--Table 4) while the highest percentage employed abroad is 16% for Engineering, 12% for Physical Science, 16% for the Professions, percentages which include both American and International students.

Table 19 shows the range of industrial/business positions held in each NRC area and the location within either California or the rest of the United States. The overwhelming

majority of positions in this sector, regardless of NRC area, is in research and professional activities, the majority of which are also found in California (380 vs 342 in the U.S. or 43% vs 38%). Management positions follow a similar pattern with 44 employed in the State vs 23 in the rest of the U.S. (55% vs 29%). Industrial post-doctoral appointments took people further afield with 16 in California vs 30 in the rest of the U.S. (31% vs 60%).

Tables 20, 20A and 21 are alphabetical lists of Industrial/Private sector employers in the five Bay Area Counties, the City of Berkeley and the State of California. It is fairly astonishing that 334 Ph.D.s are employed in this one sector in such a small geographical area when only 466 (Table 21) are employed in the entire State. That is 72% of the entire private sector employment in California. At that 24 people succeeded in finding employment within the City of Berkeley itself. The largest Bay Area employer is Hewlett Packard who employed 23 Berkeley Ph.D.s in their first position. In declining order follows IBM (21), Intel (11), Xerox (11), Chevron (10), Bechtel (8), Woodward Clyde Consultants (7), SRI (7), Syntex (6), Advanced Micro Devices (5) and many other companies with from 5 to 1 Berkeley Ph.Ds. The companies represented are many of the most innovative of the "high tech" industries and reflect the close research relationship (see T. 19) between the University and business. Another aspect of this list is the range of fields hired by most large employers. Such a list also demonstrates the idiosyncracies of how the data was reported.

Table 22 shows the geographical distribution of Government positions by job type and NRC area. Research is also the largest function in this sector as in Industry (T. 19),

employing 34% in California, 71% in the entire U.S.

Table 23 is a list of Government employers by state giving the fields employed, the numbers of each, and the total number of government employees by state. California is far and away the largest employing state, with 80 Berkeley Ph.D.s, although this high number is attributable to the presence of two large federal labs, Lawrence Berkeley and Lawrence Livermore. The District of Columbia follows as the next largest employing geographical area with 40 Berkeley Ph.D.s distributed over a range of organizations. Maryland, next door to Washington, D.C. follows with 23; New Mexico with its two national Labs, Los Alamos and Sandia with 22, thereafter, Illinois with 13, again at federal facilities. The federal government is the leading employer in all its manifestations, with very few other levels of government, even in California, offering many positions.

#### Foreign Student Employment, Tables 24-28

Table 24 shows the geographical distribution of foreign student employment by each six month graduation date. There is no clear pattern and great fluctuations in the completeness of the data, although with these reservations it appears that more foreign students are finding employment in the United States in recent years compared with the graduation dates from December 1980 through May 1982. However, all the tables establish that 57.3% of all foreign student Ph.D.s from Berkeley remain in the United States. Table 25 show the geographical distribution of this population by sector in which overall, 24% remain in California, 33.3% are employed in the rest of the U.S., and 38.6% are employed abroad. (4% of those with data have no location). Academe is the

largest employer as it is for all Berkeley Ph.D.s, with 563 or 58% of the total. Of these 54.2% are employed in the U.S., 16.5% in California alone. The next largest sector, Industry, employs 279 foreign Ph.D.s, 70.3% of which remain in the U.S., 38.4% in California. Government in the U.S. also employs foreign Ph.D.s, 46.3% of all foreign students employed in this sector.

Tables 26a-h looks at the geographical distribution of foreign students by sector for each NRC area. The NRC area with the least percentage remaining in the U.S., Education at 43% also has only 19 foreign Ph.D.s. The highest percentage remaining in the U.S. is Engineering at 62.6%, the area too with the greatest number of foreign Ph.D.s, 446 with data. In the two other NRC areas with proportionately a large number of foreign students, Physical Science and the Professions, 58% and 48% respectively remained in the United States.

In all NRC areas, except Engineering, Academe is the sector where most foreign Ph.D.s found employment. The percentages are fairly high: Education 52.6%, Humanities 93%, Life Science 62%, Physical Science 75%, the Professions 73%, Social Science 82%. The anomaly, Engineering still places 37.7% in Academe, but 50% in Industry, a pattern reflecting the sector distribution of the area as a whole, although slightly more foreign Ph.D.s go into Academe than the 32.3% average for all Engineering Ph.D.s. Usually a higher percentage of those foreign students employed in Academe also stay in the United States than the total for each NRC area: Education 60%, Humanities 62%, Life Science 41% (less than the total of 44%), Physical Science 56% (2 percentage points less than the total of 58%), Professions 48% (the same, 48%), Social Science 52%.

Engineering stands alone here also, placing 56% of its foreign Ph.D.s in U.S. academic employment as opposed to 72% in U.S. Industry. See Table 26b.

Approximately half of the Berkeley foreign Ph.D.s find employment abroad in Education (47.4%, 9 individuals), Life Sciences (49.5%, 45 individuals), the Professions (50.6%, 40 individuals), and Social Science (50.6%, 39 individuals). The remaining areas fall between 32.1% (143 individuals) for Engineering and 38.8% (73 individuals) for Physical Science.

California is the location of employment for 24% of all foreign Ph.D.s from Berkeley, ranging from a low of 15.6% (12) in Social Science to 28.5% (127) in Engineering.

Table 27 summarizes the total percentages of each NRC area by region.

#### Employment by Gender, Tables 29-31:

Table 29 shows the relative employment of men and women in each employment sector and for each NRC area. For the largest sector, Academe, there is not a great deal of difference between the placement of men and women. More women than men place in this sector in Education, Engineering (9.2% more), Life Sciences, the Professions, and Interdepartmental Ph.D.s. However, more men than women place in Academe in Humanities, Physical Science and Social Science (almost 10% more). In the NRC areas in which a fair proportion are employed in Industry, there are larger variations among men and women. In Engineering 12.9% more men are employed in Industry than women (56.3% vs 43.4%). Physical Science placement is almost equal, 29.2% for men, 29.1% for women. Oddly, although not a significant employer in Education, the Social Sciences or the Humanities, more women than men go into

Industry in these to areas than men while more men do in the Professions and the Life Sciences. Distribution among the other smaller sectors after Government seems fairly random, although it is notable that twice as many women as men are in K-12 Education in the School of Education (30, 20% of all female employment, vs 16 or 15.8% of the men).

In Table 31 the geographic distribution of men and women is shown. Women are 28.5% of all Ph.D.s, and are 34% of those who have found employment in the State of California, 613 vs 1208 men; 26% of those employed in the rest of the U.S., and 21% of those employed Abroad. Their preponderance in Academic employment in all geographic areas is also clearly confirmed.

Employment by Ethnicity, Tables 23-34:

Tables 32a through 32f present the employment by sector for all NRC areas for each ethnic minority group. These tables make graphic the great fluctuations in sectoral placement among each group by NRC area, and re-present data on composite tables on general employment (Tables 17a-h). In general, it makes clear that NRC area determines employment choice, although the results discussed on pages 10 through 13 bring out the differences among all groups in each NRC area and among NRC areas. Apart from Asians whose high placement rates in Industry in Engineering and Academe in the Humanities which have already been discussed above, these tables break down individual minority groups which were lumped together in previous tables. African Americans have a high placement rate in Academe with the exception of Education and the total exception of Engineering, in which the 4 Ph.D.s in this area all went to Industry.

Social Science with the largest number of African-American Ph.D.s of any NRC area shows a complex pattern of placement among sectors. Chicanos, too, place their limited number overwhelmingly in Academe, with the exception again of Education. Hispanics have a more differentiated pattern of employment in which Industry and Government figure. Their overall placement in academic employment is, like African Americans, and Chicanos, higher than the average. Native American and other ethnic groups place approximately the average in academic employment.

Table 33 shows the geographical distribution of minority groups. Table 34 lists all the academic employers for each minority group by state and the departments in which they are hired. This augments Table 13a-13h and Table 15, "Academic Employment by State." As Table 15 made clear, California overwhelmingly hires Berkeley Ph.D.s, 824 total. Table 34 shows that California is the most important state for academic positions for all minority groups, placing 51 Asians, (46% of all academically employed Asians, see table 32a); 18 African Americans (34% of total in Academe, see Table 32b); 14 Chicanos (52% of total in Academe, see Table 32c); 9 Hispanics (31% of total in Academe, see Table 32d); 3 Native Americans (43% of total in Academe, see Table 32e). New York, Massachusetts and Michigan are the only other states with several from each group employed.

#### Individual Department Tables, 41-128:

These tables present placement distribution by sector, ethnic group and gender as well as academic placement by rank and geographical distribution for each department.

Appendix A

Definition of Employment Sectors used in this Report

Employment categories are defined by both employer and position function. Although the coding sheet for employment is included in Appendix B, some explanation is required.

The first and largest employment category "Academe" is used for those with recognizable faculty designations such as Instructor or Assistant Professor. It also includes academic/administrative and research positions. However, if an individual's job title is "Staff Researcher" he would be ordered by employer: if a university, then under "Higher Education", if a Federal Laboratory, then under "Government." "Higher Education" refers to all administrative personnel within the university as well as professional staff of all kinds. "Professional Practice" is for those individuals who exercise a independent profession such as law or medicine within or without an organization or within a professional office such as that for architects. "Industry/ Business" covers the universe of private, for-profit organizations without respect to product or service. Included would be a range of organizations from SRI to Bechtel Corporation. "Non-profit" is the reverse of "Business". "Government" includes all direct government employment as well as all organizations funded by government such as federal research facilities. "Self-employed" captures the small business person as well as the consultant and free-lance professional who work for a variety of individuals and/or organizations. "Independent Research Facilities" are for employers engaged in research for which there is no other appropriate designation. "Medical Facility" is for those who are directly employed by a hospital, medical laboratory, or clinic. It is separate from

universities such as UCSF, or university affiliated medical research facilities.

The guidelines pretty much follow standard employment classification schemes such as the Dictionary of Occupational Titles (DOT) (US Department of Labor). Whereas this classification scheme is much simpler than the DOT, it is much more detailed that used by the National Research Council in their Survey of Earned Doctorates (SED). Beyond providing more detail, there is another major difference between these categories and those employed by the SED. Here post-doctoral positions are considered as employment rather than further education since post-doctoral positions are found in a variety of employer settings including universities, government laboratories, business, and hospitals. The other consideration is that unlike doctoral students, post-doctorates are paid for their work. Consequently they are listed under employment in the relevant categories. For those who are actively pursuing another degree there is a "Continuing Education" category. However, the coding system permits abstracting post-doctoral positions in such a way as to make this data comparable with that of the National Research Council.

Another difference is that, needing to give every individual a designation, a category was created for those who are not using their education as the basis for their activities, not just paid employment. Under the "Untrained" category are found parents, restaurant workers, policemen, retail and clerical workers. A further distinction is made between those who are employed by others and those who are self-employed whether training related or not. Although there is also an "Unemployed" category there are few in this survey who are actually unemployed, although there are some who are under-employed in the sense that while working in a professional position, it is not in the field of their training, or they

remained in positions they had before entering a doctoral program.

Appendix B: Employment Coding Sheet

25

**000 Deceased**

**010 Untrained**

- 011 parent/homemaker
- 012 sports/recreation instructor/health care
- 013 restaurant work
- 014 law enforcement
- 015 fashion
- 016 building trades
- 017 retail
- 018 clerical

**050 Unemployed**

**100 Academic**

- 109 adjunct
- 110 instructor
- 111 post doc
- 112 lecturer
- 113 assistant professor
- 114 associate professor
- 115 professor
- 116 administrator level 1 (academic deans and institute directors)
- 117 researcher (recent-graduate level)
- 118 senior researcher
- 119 visiting fellow/scholar
- 160 foreign (position unknown or not comparable)

**200 K-12 Education**

- 210 administrator
- 220 teacher
- 230 school counselor/therapist/psychologist

**250 Higher Education**

- 251 dean, program head (non-academic)
- 252 administrator
- 253 staff
- 254 teaching assistant, tutor
- 255 *psychologist*

**300 Continuing Education**

- 310 yet another Ph.D. or professional program

**400 Professional Practice**

- 410 therapist/psychologist/counselor/social worker
- 420 editor/writer/journalist (directly related to training)
- 430 law
- 440 medicine
- 450 engineering
- 460 computing
- 470 arts/theater
- 480 bio-tech
- 490 architecture

**500 Industry/Business** ✓

- 511 post doc
- 513 management
- 514 not training related
- 517 researcher/professional (eg. engineer)

**550 Non-profit organization**

- 551 management
- 552 research/professional
- 553 development
- 554 not training related
- 561 post doc
- 562 staff

**600 Government**

- 611 post doc
- 617 research/*professional*
- 630 professional staff- *not training related*
- 640 management
- 650 elected official

**700 Self Employed**

- 710 own business - not related directly to training: retail, building trades, etc.
- 720 editor/writer/journalist/translator
- 730 management consultant

**800 Independent Research Facilities** (museum, botanical garden, historical society, etc., NOT federal labs)

- 811 post doc
- 813 management/administration
- 815 faculty
- 817 research

**900 Medical Facility**

- 911 post doc
- 915 faculty appointment
- 916 administration
- 917 research
- 920 medical professional (MD, psychiatrist etc.)

Table 1  
**PLACEMENT PROJECT**  
Number of Ph.D. Recipients 1980-1989 by Department

Showing numbers for whom placement data collected, % complete, method of collection, and quality of data.

Explanation: alumni records: maintained by Department or NRC;

grad. sec: Secretary, placement person who supplied data;

ltr. 1/2: letters written directly to thesis advisors containing printouts of their students which they were asked to fill out and return to us;

data quality: evaluation of data returned: bad: several data elements missing; poor: lacking two specific data elements; ok: lacking employment dates; good: relatively complete.
