THE DESERT'S PAST

A NATURAL PREHISTORY
OF THE GREAT BASIN

DONALD K. GRAYSON

Main Selection of the Natural Science Book Club

"A very broad and well-integrated perspective on the natural history, archaeology, and history of the Great Basin. I know of no other scientist who could provide such wide-ranging and detailed coverage of so many aspects of this or of any other region."—
Robert S. Thompson

SPANNING 25,000 years and covering topics that range from Pleistocene glaciers to the ill-fated Donner Party, *The Desert's Past* presents the first complete synthesis of the environmental and human history of North America's Great Basin. Offering an encyclopedic scope with a storyteller's tone, Donald K. Grayson recounts the historical development of the Great Basin. Beginning just before the last maximum advance of glaciers in North America, the author reconstructs the Great Basin's defining environmental features. He catalogs the existence of such mammals as lions, camels, and mammoths that once lived in this region and discusses the rise and fall of huge lakes that were once found here. He also characterizes some 11,500 years of plant and animal history in the Great Basin and shows that this history is inseparably linked to the past environments of this region.

Donald K. Grayson is a professor in the Department of Anthropology and the Burke Memorial Museum at the University of Washington.
