20th Edition of TOP500 List of World's Fastest Supercomputers Released

MANNHEIM, Germany; KNOXVILLE, Tenn.; & BERKELEY, Calif. – In what has become a much-anticipated event in the world of high-performance computing, the 20th edition of the “TOP500” list of the world’s fastest supercomputers was released today (November 15, 2002).

The Earth Simulator supercomputer installed earlier this year at the Earth Simulator Center in Yokohama, Japan, is with its Linpack benchmark performance of 35.86 Tflop/s (trillions of calculations per second) retains the number one position. The #2 and #3 positions are held by two new, identical ASCI Q systems at Los Alamos National Laboratory (7.73 Tflop/s each). These systems are built by Hewlett-Packard and based on the AlphaServer SC computer system.

For the first time ever, 2 PC-based clusters were able to gain a top 10 spot. At position 5 is a cluster at Lawrence Livermore National Laboratory built by Linux NetworkX and Quadrics. At position 8 is a cluster at the Forecast Systems Laboratory at NOAA built by HPTi with a Myrinet interconnect.

The new TOP500 list, as well as the former lists, can be found on the Web at <http://www.top500.org/>.

Gaining entry into the top 10 positions on the new list now requires achieving a Linpack performance of more than 3.2 Tflop/s. Already 47 systems are reported to exceed Linpack performance of 1 Tflop/s. Clearly, Teraflop-level systems are in widespread use now.

Performance levels at all positions of the TOP500 list keep growing impressively driven by Moore’s Law. The total combined performance of all 500 computers on the list is 293 Tflop/s, compared to 222 Tflop/s just six months ago. The “slowest” system on the newest listing is now 195.8 Gflop/s (billions of calculations per second), compared to 134.3 Gflop/s six months ago.

In terms of total performance of all the installed systems, the latest TOP500 edition shows IBM as still the clear leader with 31.8 percent, ahead of HP with 22.1 percent and NEC with 14.6 percent.

For the second time, Hewlett-Packard is the leader in terms of the number of systems on the list, with 137 installed systems - only slightly ahead of IBM with 131 systems. Sun is third in this category with 88 systems. No other company was able to gain more than 10 percent in either of these two categories.

The list is compiled by Hans Meuer of the University of Mannheim, Germany, Erich Strohmaier and Horst Simon of the U.S. Department of Energy’s National Energy Research Scientific Computing Center at Lawrence Berkeley National Laboratory, and Jack Dongarra of the University of Tennessee. The list was released today and will be presented in detail at the SC2002 Conference in Baltimore, MD, which starts Saturday, Nov. 16, and continues through Friday, Nov. 22.

A total of 55 Intel-based and eight AMD-based PC clusters are now present in the TOP500. The number of clusters in the TOP500 grew again to a total of 93 systems. Fourteen of these clusters are labeled as ‘Self-Made’ as they are designed and assembled by the end users themselves.

The number of systems reported at industrial customers fell slightly to 226 systems, down from 248 six months ago and 261 one year ago.

Seven of the TOP10 systems, 46% of all 500 systems, and 51% of the total performance are installed in the United States. Also 91% of all 500 systems are produced in the United States. These market shares demonstrate the leadership of the U.S. in the usage and production of High Performance Computing.

#

All changes are from June 2002 to November 2002:

Highlights from the TOP 10:

- The Earth Simulator build by NEC remains the unchallenged #1.
- 2 segments of the ASCI Q at Los Alamos are new at #2 and #3 with 7.7 TF/s Linpack each.
- 2 new PC cluster made the TOP 10:
 - #5 is a Linux NetworkX/Quadratics cluster at Lawrence Livermore National Laboratory.
 - #8 is a HPTi/Myrinet cluster at the FSL/NOAA.
- Two other systems are new in the TOP10:
 - at #9 a IBM Power4 system installed in UK at the HPCx Consortium,
 - at #10 a IBM Power4 system installed at NCAR.
- 3.2 TF/s are needed to enter the top 10.
- Hewlett-Packard has 4 systems in the TOP 10 followed by IBM with 3 systems, and one from NEC, Linux NetworX, and HPTi each.
- ASCI Red which was in the top 10 since June 1997 (7 times as #1) droped out of the top 10.
- 7 of the TOP 10 systems are installed in the US, and one in Japan, France and UK each.

General highlights from the Top 500:

- The number of systems exceeding the 1 TFlop/s mark on the Linpack is now 47 up from 23 just 6 month ago.
- 100 systems have peak performance above 1 TFlop/s up from 70 systems 6 month ago
- The last system on the list with 195.8 GF/s was listed at position 318 in the last TOP500 just 6 month ago.
- Total accumulated performance is 293 TFlop/s compared to 222 TFlop/s 6 month ago.
- Entry level is now 195.8 GF/s compared to 134.3 GF/s 6 month ago.
- The entry point for the top100 moved from 447 GF/s to 558 GF/s.
- PC Cluster are now present at all levels of performance.
- A total of 55 Intel based and 8 AMD based PC cluster are in the TOP500.
- Including 4 Sun and 3 Alpha based clusters and 23 HP AlphaServer, the number of clusters in the top500 grew further to 93 from 80 systems.
- 14 of these clusters are labeled as 'Self-Made'.
- The number of systems at industrial customers fell slightly to 226 systems down from 248 6 month ago and 261 one year ago.
- The US keeps it's prime position as supercomputer user (46% of systems and 51% of installed performance) and producer (91% of systems) with only little changes in geographical distribution.
- Despite the large performance of the ES, Japan is third in installed performance and number of systems behind Europe.
- IBM is still leading the list with respect to the installed performance with a stable share of 31.8% ahead of HP 22.1% and NEC with 14.6%.
- Hewlett-Packard stays slightly ahead of IBM with respect to the number of systems installed (HP 137 and IBM 131). Sun is third with 88 systems.
- No other manufacturer is able to capture more than 10% in any category.

TOP500 Sublist for November 2002
