PREFACE

One of the present compilers in 1949 presented a bibliography on the same subject and same title as REPORT No. 4 of the California Archaeological Survey. The 1949 bibliography ran to 27 pages - about one third of the length of the present list. We offer the present work not as a complete reference list to publications on the subject, but rather as an interim and admittedly incomplete bibliography which may be of assistance in locating information on regional archaeology. We have generally avoided listing papers which have appeared in short-lived, usually mimeographed, newsletters. There are dozens of these fugitive series, and in some cases they report useful data, but since they are not regularly available there seems little purpose in citing them. A useful project would be for some person to compile a reference collection of them in some library or research facility where they could be consulted.

We had originally planned to annotate and cross-reference this bibliography, but that proved to be such a large task that we have not been able to accomplish it.
