## **18th Edition of TOP500 List of World's Fastest Supercomputers Released**

MANNHEIM, GERMANY; KNOXVILLE, TENN.; & BERKELEY, CALIF. – In what has become a much-anticipated event in the world of high-performance computing, the 18<sup>th</sup> edition of the “TOP500” list of the world’s fastest supercomputers was released today (November 9, 2001).

The latest edition of the twice-yearly ranking finds IBM as the leader in the field, with 32 percent in terms of installed systems and 37 percent in terms of total performance of all the installed systems. In a surprise move Hewlett-Packard captured the second place with 30 percent of the systems. Most of these systems are smaller in size and as a consequence HP’s share of installed performance is smaller with 15 percent. This is still enough for second place in this category. SGI, Cray and Sun follow in the number of TOP500 systems with 41 (8 percent), 39 (8 percent), and 31 (6 percent) respectively. In the category of installed performance Cray Inc. keeps the third position with 11 percent ahead of SGI (8 percent) and Compaq (8 percent).

The list is compiled by Hans Meuer of the University of Mannheim, Germany, Erich Strohmaier and Horst Simon of the U.S. Department of Energy’s National Energy Research Scientific Computing Center, and Jack Dongarra of the University of Tennessee. The list was released today and will be analyzed at the SC2001 Conference in Denver, CO, November 10 –16, 2001.

Compaq made its debut at the very top of the list with two new systems in the TOP10. Six months ago the most powerful Compaq system was only listed at position 43. Eight of the TOP10 systems are installed in the United States, which demonstrates the leadership of the U.S. in the usage of High Performance Computing.

The IBM ASCI White system at Lawrence Livermore National Laboratory is still the number one supercomputer in the world, with a performance of 7.2 Tflop/s (trillions of calculations per second) on the Linpack benchmark. The number two spot is now taken by the new Compaq AlphaServer SC system at the Pittsburgh Supercomputing Center, ahead of the IBM SP system at the Department of Energy’s National Energy Research Scientific Computing Center (NERSC), an unclassified supercomputing center at Lawrence Berkeley National Laboratory (LBNL) in Berkeley, Calif. At number six is another new Compaq system at DOE’s Los Alamos National Laboratory.

The list now indicates 16 systems exceeding the 1 Tflop/s level using the Linpack benchmark, eight of these systems are from IBM. The TOP500 already contains 30 systems exceeding 1 Tflop/s level for peak performance. The two highest ranked clusters are this time the self-made CPlant at Sandia National Labs and the Titan Itanium cluster from IBM installed at the NCSA, at numbers 29 and 34 respectively. The number of clusters build with small SMPs as building blocks steadily increases in the TOP500. There are now 43 such systems listed. The dominant architecture with 50 percent of systems are still the massively parallel systems (MPP) followed by clusters of large SMP systems, the so called constellations (29 percent).

The list exhibits unbroken growth at all ranges of performance. The total combined performance of all 500 computers on the list is 134.4 Tflops/ compared to 108.8 Tflop/s six month ago and 88.1 Tflop/s one year ago. The “slowest” system on the

newest listing is now 94.3 Gflop/s (billions of calculations per second), compared to 67.8 Gflop/s 6 months ago and 55.1 Gflop/s in November2000.

The new TOP500 list, as well as the former lists, can be found on the Web at <http://www.top500.org/>. In a **BOF Session at SC2001, Wednesday, November 14th, 5:30 - 7:00 pm, room A107**, the authors will give detailed insight in the new list. TOP500 Certificates for all entries in the 18th list may be picked up in Denver at the SC Exhibition, booth #520 (Nov 13-15).

###

**All changes are from June 2001 to November 2001:**

**Highlights from the Top 10:**

- ASCI White is again #1 with unchanged performance of 7.2 TF/s on the Linpack
- Three systems are new in the TOP10:
  - at #2 with 4 TF/s a Compaq AlphaServer installed at Pittsburgh Supercomputing Center
  - at #6 with 2 TF/s a second Compaq AlphaServer at the Los Alamos National Lab
  - at #10 with 1.3 TF/s a IBM SP Power3 system installed in Germany at the National Weather forecast center (Deutscher Wetterdienst) in Offenbach
- Lawrence Livermore National Lab has installed an additional 1.1 TF/s IBM Power3 system, which is listed at #15
- This brings the number of systems exceeding the 1 TFlop/s mark on the Linpack up to 16
- 30 systems have peak performance above 1 TFlop/s including two self-made clusters:
  - CPlant at Sandia at #29 and
  - Titan at NCSA at #34
- 1.29 Tflop/s is the entry point for the Top 10
- 5 of the TOP10 systems are from IBM, 2 from Compaq, and one from Intel, Hitachi, and SGI.
- 8 of the TOP10 systems are installed in the US, and one in Japan and Germany each.

**General highlights from the Top 500:**

- The new entry level of 94.3 GF/s would have been enough to be listed on position 295 in the last TOP500 just 6 months ago
- Total accumulated performance is 134.4 TFlop/s compared to 108.8 TFlop/s 6 months ago
- Entry level is now 94.3 GF/s compared to 67.8 GF/s 6 months ago
- In June 1993 no system exceeded this limit. From the Nov 1993 list only the "Numerical Wind Tunnel" at NAL in Japan exceeded this limit. This system is actually still on the list with improved hardware and performance at position 130.
- The entry point for the top100 moved from 241 GF/s to 300 GF/s.
- The first Itanium cluster is at the NCSA at #39 with 678 GF/s.
- The first Windows2000 cluster is at the Cornell Theory Center at #320 with 121 GF/s.

**Trends over time:**

- The US keeps its prime position as supercomputer user and producer with only little changes in geographical distribution
  - The number of machines used in industry increased again to 261 from 236.
  - The number of machines used in research stayed stable at 112 (from 118).
  - The number of machines used in academic declined slightly to 83 from 92.
- 
- IBM is again leading the TOP500. It is still leading the list with respect to the number of systems installed (32% down from 40%) and the installed performance with a stable share of 37%.

- Hewlett-Packard made a big jump forward and has 153 systems (30%) in this list compared to only 41 in June 2001. All these systems are smaller in size. The first one appears at position 148. As a consequence the total HP share of installed Linpack performance is comparably smaller with 15% but still sufficient for position 2 in this category.
- SGI, Cray and Sun follow in the number of systems with 41 (8%), 39 (8%), and 31 (6%) respectively.
- With respect to installed performance Cray Inc. keeps the third position with 11% ahead of SGI (8%) and Compaq (8%).

---
