We would like to submit the following correction to our recently published paper [1].

## Error in Tables

In the original publication, there were mistakes in Tables 2 and 5 as published. The standard deviation listed for the CS group on the DSMSE language test was mistakenly listed as 0.07 in Table 2. The *p*-value listed for the RADD-2 Expressive Language in Table 5 was mistakenly listed as <.001 in Table 5. The Estimate value for the Purdue Pegboard was mistakenly listed as 0615 in Table 5. The corrected Tables 2 and 5 appear below.

**Table 2.** Means and standard deviations of raw test scores by AD status and their hypothesized cognitive domain.
